1. General Process

1.1. Purpose

This guide provides POM28 project submission and prioritization information in accordance with references (a) and (b) (please see Appendix A for a full list of references) and Appendix B. Included are:

- Submission and assessment timeline
- Strategic Alignment and Guiding Principles (SA/GP) and Risk Evaluation criteria
- Project submission guidelines
- IPL support documentation per reference (c)
- Shore Cross Functional Team Infrastructure Investment Plan – Working Group (SCFT IIP-WG) assessment guidance provided in Sections (2-8)

For the purposes of this Guide, Budget Year (BY) refers to FY28, BY+1 refers to FY29, BY+2 refers to FY30, BY+3 refers to FY31 and BY+4 refers to FY32.

1.2. Applicability

This guide applies to all CNIC Installation and Region facility project proposals submitted for POM28 consideration in accordance with the timeline outlined in **Table 1** below and in the subsequent sections. Region Commanders will lead a collaborative effort with Combatant Commanders (CCDRs), Navy Component Commands (NCCs), and Lead Proponents and Warfare Enterprise/Providers (WE/P) to integrate all requirements within their Area of Responsibility (AOR). (For the remainder of this document, "Lead Proponents and Warfare Enterprise/Providers" will be referred to as "Lead Proponents.") Facility projects, at Enduring or Contingency locations, include active and reserve Military Construction (MILCON), Unspecified Minor Construction (UMC), Laboratory Revitalization Program (LRP), Revitalized Defense Industrial Base Facilities (RDIBF), Special Projects (Centrally Managed Facilities Sustainment, Restoration, and Modernization) and Energy. In addition, Energy Resilience and Conservation Investment Program (ERCIP) and Naval Construction Force (NCF) requirements submissions are detailed in Section 8.

Table 1: Schedule and Major Milestones

1.3. Roles & Responsibilities

Appendix C illustrates the details, the participation and responsibilities of each Command within the various stages of IIP development within the POM28 submission and assessment process. It specifically details which Commands are considered "Chair," "Core," and "Advisory" during the two (2) phases of IIP refinement from an unconstrained list to a constrained list, as well as which Commands support as a Line of effort (LOE) lead.

1.4. Installation Commanding Officers

In accordance with **Table 1**, installations shall complete the actions in the subparagraphs below for POM28 MILCON, FSRM, and UMC.

1.5. Combatant Commanders (CCDRs)/Navy Component Commands (NCCs) and Lead Proponents (LP) Coordination

Installations shall coordinate development of each project with supported Commands and tenants whose mission is supported by the project. In the absence of non-shore infrastructure solutions, installations shall develop shore infrastructure solutions. Upon concurrence from the Lead Proponent, installations will identify the Lead Proponent in PAX using reference (c). In addition, once the project is linked to the IPL module in iNFADs, the Regions will have an opportunity to further clarify and assign Lead Proponents from a more comprehensive drop-down list in the IPL module not otherwise available in PAX (e.g. SSP). Lead Proponents are unable to assess their projects in the IPL module until the project is linked to the appropriate Lead Proponent. Where warranted, Secondary and Tertiary Lead Proponents shall be indicated in the IIP and briefing documents as appropriate. Installations shall identify projects included in CCDR functional or theater posture plans, if known, on the general tab within the IPL module. **Tables 2** and **3** include a list of Lead Proponents and CCDRs.

Lead Proponents/Warfare Enterprises/Providers
Information Warfare Enterprise (IWE)
Naval Aviation Enterprise (NAE)
Navy Expeditionary Combat Enterprise (NECE)
Strategic Systems Programs (SSP)
Surface Warfare Enterprise (SWE)
Undersea Warfare Enterprise (USE)
Bureau of Medicine and Surgery (BUMED)
Commander Navy Installations Command (CNIC)
CNIC – N3 Operations
CNIC – N9 Fleet & Family Readiness
Manpower, Personnel, Training and Education (MPT&E)
Naval Air Systems Command (NAVAIR)
Naval Facilities Engineering Systems Command (NAVFAC)
Naval Sea Systems Command (NAVSEA)
Naval Supply Systems Command (NAVSUP)
Naval Information Warfare Systems Command (NAVWAR)
Special Warfare Command (SPECWAR)
Office of Naval Research (ONR)
Reserve Force (RESFOR)
Military Sealift Command (MSC)
Naval History and Heritage Command (NHHC)
Navy Munitions Command (NMC)
Naval Education Enterprise (NEE)

Table 2: List of Lead Proponents/Warfare Enterprise and Providers

Combatant Commands
United States Indo-Pacific Command (USINDOPACOM)
United States Special Operations Command (SOCOM)
United States European Command (EUCOM)
United States Central Command (CENTCOM)
United States Africa Command (AFRICOM)
United States Strategic Command (STRATCOM)
United States Transportation Command (TRANSCOM)
United States Southern Command (SOUTHCOM)
United States Northern Command (NORTHCOM)
United States Cyber Command (CYBERCOM)
United States Space Command (SPACECOM)

Table 3: List of Combatant Commands

1.6. Commander, Navy Installations Command (CNIC)

In accordance with reference (b), CNIC shall facilitate the Shore Cross Functional Team Infrastructure Investment Plan – Working Group (SCFT IIP-WG).

1.7. Shore CFT Infrastructure Investment Plan – Working Group (SCFT IIP-WG)

The SCFT IIP-WG shall review and assess project submissions for MILCON, Special Projects, and UMC. As the shore integrator, the SCFT IIP-WG is required to provide a consistent, systematic, and deliberate approach to identify investment requirements that close capability gaps and maximize fleet readiness. SCFT IIP-WG requirement reviews shall include coordination with the Lead Proponents to verify the validity of requirements, arbitrate differences and ensure project data sheets provide the detailed information required to allow projects to be rated, assessed and prioritized consistent with CNO Guidance and Risk Assessment criteria.

The SCFT IIP-WG will receive briefings from the Lead Proponents, CCDRs, and Regional Engineers. The SCFT IIP-WG shall use the Strategic Alignment and Guiding Principles as well as the Severity criteria and approved weightings outlined in Section 2 to prioritize MILCON, Special Projects and UMCs during assessments. In addition, once projects are assessed, the SCFT IIP-WG will use Mission Need Date (MND) and rulesets outlined in Section 2 to determine region required program year.

The SCFT IIP-WG shall also review ERCIP & NCF projects as presented to provide input and recommendation to the ERCIP & NCF prioritization processes (see Section 8). Through a pre and post assessment governance process, the SCFT IIP-WG shall ensure all critical asset requirements are adequately accounted for and assessed.

1.8. CCDRs/NCCSs/LPs & Reserve Force (RESFOR)

The Lead Proponent or RESFOR shall review, validate, and prioritize projects for which they are the lead in accordance with the dates outlined in **Table 1**. In addition, if a Lead Proponent has equity in a project for which they are not the lead project proponent, but a stakeholder, there is a text block in the supplemental tab of the IPL module to capture other stakeholder endorsements

(e.g. Surface Warfare Enterprise may endorse a Naval Sea Systems Command project). Where warranted, Secondary and Tertiary Lead Proponents shall also be indicated in the IPL.

1.9. Region Commanders

Regions shall use a formally established Region Mission Integration Group (RMIG) to develop IIP recommendations based on CNO Strategic Guidance and Risk Assessment criteria in alignment with Section 6 and in coordination with supported Lead Proponents. To the greatest extent possible, Regions shall coordinate and schedule RMIGs with the intention of enabling maximum Lead Proponents participation. An RMIG calendar including dates and times of RMIG and RMIG Working Group (RMIG-WG) meetings across the Enterprise will be sent SEPCOR to mitigate schedule conflicts.

1.10. POM28 General Submission Guidance

a. For POM28, the SCFT IIP-WG will develop and submit a five-year Infrastructure Investment Plan (IIP) to the SCFT which separately prioritizes MILCON projects and FSRM centrally managed special projects at both enduring and contingency locations. Regions shall reference the approved POM27 SCFT IIP mentioned in Sections 3 & 4 when building their POM28 Region Requirements Plan.

   Only mission critical emergent or accelerated projects within FY28 & FY29 as well as new FY32 requirements with a validated Mission Need Date (MND) shall be briefed to the SCFT IIP-WG unless specifically requested. Additionally, a list of projects from POM27 that were added by the LEO leads should be briefed as the one exception. This will ensure that all projects receive a DL score. Emergent projects are defined as having a requirement no later than BY, and they must support a Mission Need Date or similar finite requirement. Requests for projects within FY28 & FY29 to be re-briefed will be at the discretion of the SCFT IIP-WG provided a valid justification is submitted detailing significant changes to scope or mission impact. In addition, projects the LOE leads do not see listed on the 1-N Preliminary Briefing List (PBL) can also be requested to be brief by the WG. All valid Region requirements not programmed or locked shall be prioritized. These requirements refer to those projects in FY27 and FY28 of the most current version of the POM27 FYDP or prior Enacted MILCONs (e.g. FY25 Enacted or FY25 Budget Estimate Submit (BES)) for MILCON requirements and any special project identified as a FY28-30 requirement in the approved POM27 SCFT IIP for FSRM requirements. The SCFT IIP-WG will validate the assessment for FY28 and FY29 projects identified in the approved POM27 IIP. The SCFT IIP-WG will integrate all requirements assessed, but not programmed or included in a locked list, and include them as part of the POM28 IIP.

b. Projects identified as Must Fund (MF) will be limited to projects that are Program Decision Memorandum (PDM) or Program Budget Decision (PBD) directed, Congressionally directed, or a follow-on increment to an existing project. These projects shall be placed at the top of the IIP. In addition, for the purposes of this guidance, other critical projects will be identified as MF by Naval Reactors (NAVSEA 08) based on their association to nuclear propulsion as outlined in reference (d), Industrial Operations (NAVSEA 04) based on their association to Dry Dock certification as outlined in reference (e), or as required for Environmental Requirements. These projects will receive a Decision Lens (DL) score and be prioritized by

their DL amongst one another on the IIP and placed directly below the true MFs outlined above.

1. MILCON increments shall be classified as MF in the subsequent years following the execution of the preliminary increment. These projects will receive the same DL score as the preliminary increment and will be prioritized along with "other critical" MFs following the "true" MFs.

2. Subsequent Phases for FSRM projects shall also be classified as MF. The scope for each phase should be developed as a complete and useable project. These will receive the same DL score as the preliminary phase and will be prioritized amongst all other requirements.

c. Regions shall use Decision Lens Web (DLW) to assess projects. IPL management should mirror DLW assessment by the Regional Engineer (RE). Priorities generated by DLW are a tool for requirement generation. Regional Commanders may deviate from DLW with final priorities being recorded in the IPL.

d. All requirements will continue to be submitted and assessed electronically. A requirement will only have an IPL record after a linkage with PAX is established. The IPL Module will be the primary means to pull data for scoring individual projects. Therefore, a PAX generated RDS and once approved for development, a DD-1391 will be required for a project to be considered for funding during program development.

e. PAX/IPL has been synchronized with iNFADS and will be updated on a daily basis with iNFADS data (e.g. condition rating, configuration rating, capacity rating, etc.). The Installations are responsible for ensuring all facility data (i.e. iNFADS, MAXIMO, URT, etc.) is accurate, complete, and in accordance with standard Naval Facilities Engineering Systems Command (NAVFAC) practices and publications (located on the NAVFAC Portal).

f. Each Special Project identified in a program must be associated with a work type/special interest code: New Footprint (NF), Sustainment (ST), Restoration & Modernization (RM), or Demolition (DE). If work is being proposed on an existing facility, then the facility must be associated with an iNFADS Navy Facility Asset (NFA) Facility ID.

g. Functionality exists in IPL to maintain project scoring and assessments for future reference. References (c) are the updated comprehensive IPL User Guides to facilitate input and validation of projects.

h. Per reference (f), Shipyard Infrastructure Optimization Program (SIOP) projects will not be included in the SCFT IIP. SIOP projects will be reviewed during Phase 2 of IIP development during LOE prioritization, however SIOP will submit a separate IIP to the SCFT.

i. The Office of the Under Secretary of Defense for Acquisition and Sustainment directs NSIP-eligible projects required for U.S. support to the North Atlantic Treaty Organization (NATO) will be funded, when possible, through the NATO Security Investment Program (NSIP.) Those projects meeting NSIP eligibility, with a pending or existing NATO Capability Package

(CP) or Capability Program Plan (CPP), shall be highlighted in the IPL. The brief shall delineate the difference, if any, between the project scope and the NATO CP or CPP scope and indicate NATO NSIP funding, if known." In accordance with reference (g), following RDS level approval, installations shall proceed with DD Form 1391 creation. The Regional Engineer signature on the DD-1391 is required to validate the accuracy of the planning status level and the associated BFR/Facility Planning Document (FPD) and Installation Figure of Merit (IFOM) data. Regional Engineers may NOT delegate signatures for MILCON, LRP projects, or UMC. NAVFAC HQ PDC (MILCON only; on behalf of CNIC N4/CNIC N4) will verify iNFADS BFR data currency for the respective category groups. With regard to Special Projects, Regional Engineers are required to ensure proper classification of work type and sign all DD-1391s for projects valued at $7M or more. Signature for Special Projects below $7M may be delegated to Deputy Regional Engineers or Assistant Regional Engineers.

1.11. Point of Contact

CNIC point of contact regarding this matter is Lisa Reifschneider (202) 433-3710 or email lisa.n.reifschneider.civ@us.navy.mil.

2. Criteria & Submission Deliverables

2.1. Overview

For POM28, the SCFT IIP-WG will develop and submit a Five-Year Infrastructure Investment Plan (IIP) to the SCFT IIP-WG Principals which separately prioritizes MILCON and FSRM centrally managed special projects at both enduring and contingency locations. To facilitate the process, all Regions shall brief both MILCON, FSRM, and UMC projects from the Project Data Sheet (PDS). Up to six pictures can be added to the PDS within the IPL module under document management to supplement the PDS material. The Region submission should be sorted by the overall priority of requirements regardless of Region Required Program Year. Additional Region briefing guidance is outlined in Sections 3, 4 & 5.

For scoring purposes, the list of Fleet Concentration Areas (FCAs) is provided below. This list includes CNIC installations or special areas within a 30-mile radius of the principal installation listed.

a. San Diego
b. National Capital Region (NCR)
c. Jacksonville
d. Hampton Roads
e. Kitsap
f. Pearl Harbor
g. Marianas
h. Yokosuka

2.2. Requirement Scoring Criteria

Section 2 delineates definitions and assessment criteria to include both the Strategic Alignment and Guiding Principles (Mission Alignment, Readiness Support, and Operational Cost) and Risk Assessment (Severity). The assessment rating criteria comply with and align to references (g)-(o)

and will be used to evaluate shore infrastructure facility projects for POM28. Each project will be evaluated on a 0-4 scale corresponding to: No Contribution (0), Marginal (1), Important (2), Very Important (3), and Critical (4). See Appendix D for a detailed matrix of all evaluation criteria for each assessment component.

All definitions for the guiding principles and risk assessment are included in the subsequent sections. For POM28, MILCON and FSRM Structural Model and Weighted Priorities (Decision Lens) will be combined into one Facilities Investment Model (Appendix E).

2.2.1. Mission Alignment

Mission alignment is based on Enterprise-validated capability requirements to meet current or future CNO strategic intent. Mission alignment includes properly located, sized, configured and sequenced infrastructure to support current and future Navy force structure, laydown and operations. Infrastructure is aligned to locations where the Fleet operates/trains/maintains. Priority is given to projects at installations and locations that support Department of Defense forward assigned or allocated forces.

2.2.2. Readiness Support

Readiness support maximizes Navy Enterprise outputs and contributes directly to current and future fleet readiness generation. Readiness benefits can be measured through changes in force generation output, such as increased production rates or decreased time to execute depot maintenance availabilities. Readiness support may also enhance Quality of Service (QOS) for the total Navy workforce and their families by improving facilities where they work, train and live. QOS facilities complement and augment installations with surrounding community capabilities.

For any utility projects, valid Utility Risk Tool (URT) scores, outage reports, and other pertinent utility-related metrics shall be provided within the Readiness Support justification statement or as supplemental documentation.

2.2.3. Operational Cost

Operational Cost focuses on delivering required capabilities at the lowest life-cycle cost, improving the sufficiency of substandard infrastructure and eliminating excess. Operational cost improves the effectiveness of the Navy's shore infrastructure and includes operational process improvement, energy savings, consolidation, conversion, footprint reduction, manpower reductions and Base Operating Support (BOS). Infrastructure projects must capture and quantify savings that are a part of the Navy's total ownership cost on a documented detailed cost analysis included in Appendix D.

2.2.4. Severity

Severity indicates the likelihood of failure and impact of failure on mission readiness if the project is not executed.

2.2.5. Facility Readiness Ratings

Condition, Configuration, and Capacity ratings are the three (3) components of the Installation Figure of Merit (IFOM) that shall be included in overall project assessment. These ratings are updated and calculated in Internet Navy Facilities Asset Data Store (iNFADS) or Maximo. Appendix E details the

exact percentage IFOM data contributes to a project's overall Decision Lens (DL) score. The next few sections outline these Facility Readiness ratings and how to access them in greater detail.
The Condition Rating, Configuration Rating, and Capacity Rating are factors considered in the scoring and prioritization of Capital Investment projects. Below is guidance on how these ratings are updated and calculated in Internet Navy Facilities Asset Data Store (iNFADS) or Maximo. Accurate Condition, Configuration and Capacity ratings are essential to ensure accurate scoring of projects. The Facility Condition Index (FCI) is used to generate the Navy's official Deferred Maintenance and Repair Backlog.

2.2.5.1. Updating Condition Ratings for Buildings

a. The Condition Rating indicates the physical condition or health of a facility. It is a data element in iNFADS that is updated every evening for buildings from the MAXIMO Location condition index field. The location condition index calculated in MAXIMO is the weighted average of the component condition indices within a building. Each component's relative weight is determined by the component/equipment replacement value field ($) in MAXIMO. This field is manually managed by the installation, and an incorrect or missing value could negatively influence an installation's project.

b. The condition index of a component in MAXIMO is updated by assigning or updating the direct condition rating meter. MAXIMO converts this color-coded direct condition rating meter to a Condition Index (CI) score.

c. Questions concerning building condition ratings should be directed to Mr. Jonathan Crittenden, NAVFAC HQ PW Condition Based Maintenance (CBM) Program Manager, DSN 312-325-8263, commercial (202) 685-8263, or e-mail jonathan.e.crittenden@us.navy.mil.

2.2.5.2. Updating Condition Ratings for Facilities in the Specialized Infrastructure Inspection Program (SIIP)

a. Below is a list of facilities currently included in the "Centrally Managed" SIIP. Many of these specialized facilities are inspected by NAVFAC EXWC. EXWC and NAVFAC HQ perform quarterly updates in MAXIMO to report the latest CIs, SMS Requirements, and FCIs. MAXIMO pushes these updates to iNFADS daily.

- Airfield Pavement and Helipads
- Waterfront Structures
- Dry Docks
- Bridges (Vehicle, Railroad and Pedestrian over roadways and water)
- Water Tanks > 10,000 Gallons
- Federal Emergency Management Agency Reportable Dams
- Cathodic Protection Systems
- Tactical Tall Towers
- Fire Fighter Trainer
- Helicopter Rope Suspension Technique and Rappel Towers

b. If the condition rating of a specialized structure changes between scheduled inspections, the installation should send supporting subject matter inspection and documentation (e.g., an Architectural-Engineering report establishing the CI of facility or PAVER report in the case of airfield pavement), along with a list of those structures with updated condition ratings to Mr. Craig Daniels, NAVFAC HQ SIIP Program Manager, DSN 325-9357, commercial (202) 685-9357, or e-mail william.c.daniels1@us.navy.mil.

2.2.5.3. Updating Condition Ratings for Structures Not Included in a "Centrally Managed" Inspection Program

a. To update the Condition Ratings for structures, not included in a specialized inspection program, contact the CBM Program Manager, who will provide instruction on how these Condition Ratings can be updated in Maximo and iNFADS.

2.2.5.4. Updating Condition Ratings for "At Risk Structures" of facilities included in the above mentioned programs

a. "At Risk Structures" are identified from TASK 2021-N4I64FRONTOFFICE-9.2 "Facilities Structural Inspections". They are updated in the following manner: The licensed structural engineer overseeing the inspection submits the field report to the Structural Inspections Program Manager (SIPM) at the responsible Facility Engineering Command. The SIPM coordinates with the PWD Planning Branch or Real Property Accountability Officer to ensure the field inspection report is uploaded to INFADS. The field inspection report indicates a structural rating, which ranges from "1" (not severe, no immediate action) and "2" (not severe, follow-up action needed to inspect further) through "5" (most severe, immediately condemn facility), for a facility.

b. The "AB10 Shell" Master System in Maximo/iNFADS is used to track "At Risk" Structures. The 1-5 structural rating resulting from the structural inspection is translated to a CI value for "AB10 Shell". A structural rating of "3" for an at risk structure corresponds to a CI of 50 for "AB10 Shell", a rating of "4" results in a CI value of 30, and a rating of "5" results in a CI of 10. The "AB10 Shell" CI is included in the calculation of the overall CI of the facility.

2.2.5.5. Updating Condition Ratings for Utility Structure and Linear Structures

a. The Condition Rating for utilities indicates the physical condition based on a Degradation Index (DI) and sustained through the Utilities Infrastructure Condition Assessment Program (UICAP) processes. The DI rating is a 0-4 scale from new (0) to inoperable (4) utility equipment. The DI determination is made on Utilities assets that are inventoried in Maximo and meet one or more of the following:

- Asset requires recurring or preventive maintenance.
- Asset performs a critical function within the system.
- Asset would be repaired rather than replaced if it fails.

PWD Maintenance and engineering staff ensure the DI ratings are updated in Maximo on a timely basis.

Each utility iNFADS record may have multiple Maximo assets. When a utility asset in Maximo is updated with a DI, Maximo automatically converts the 1-5 scale DI to a 10-100 scale Condition Index (CI). The location CI calculated in Maximo for the utility is the replacement value-weighted average of the condition indices of all associated Maximo assets.

b. Questions concerning utility condition ratings should be directed to Mr. Timothy Rugani, NAVFAC HQ PW UEM, commercial (757) 880-6121, or e-mail timothy.e.rugani.civ@us.navy.mil.

2.2.5.6. Updating the Facility Condition Index (FCI)

a. The FCI is a financial liability metric and is calculated as the ratio of MAXIMO SMS requirements to iNFADS plant replacement value. FCI is calculated in MAXIMO and updated daily in iNFADS. FCI is calculated using the following formula:

b.

$$\boldsymbol{FCI = \left(1 - \frac{SMS\ Requirements}{PRV}\right) \times 100}$$

A score of 100 indicates no known requirements and a score of 0 would indicate requirements equal to Plant Replacement Value (PRV). A negative FCI can be a valid score, if the repair requirements generated from an SMS tool (e.g., BUILDER) are greater than the iNFADS PRV of the facility. FCI values are useful when evaluating cost effectiveness of various investment opportunities for a single facility, or when comparing multiple facilities in the planning phase.

c. FCI scores are primarily updated in two ways:

1. NAVFAC HQ imports requirements from SMS tools (e.g. BUILDER, PAVER, etc.) and EXWC into MAXIMO as new Service Requests (SRs) with Work Type: "Requirement" and Sub Work Type: "Requirement." The import happens on a regular basis with a frequency determined by the appropriate SMS program manager. These SRs are then used along with PRV to calculate the FCI. Only requirements from the current fiscal year and previous fiscal year go into the numerator of the FCI equation.

2. When condition-based requirements are related to projects in MAXIMO and the projects are completed or the condition-based requirements are closed/cancelled, the FCI score updates automatically in MAXIMO.

2.2.5.7. Updating Configuration Ratings

a. The Configuration Rating is a 0-100 measure of the asset's capability to support the current occupant or mission with respect to functionality. A Configuration Rating of 100 indicates the facility has no functional deficiencies. The Configuration Rating is calculated in iNFADS from an algorithm that weights Deficiency and Severity Codes assigned to facilities during Asset Evaluations or by installation planners. Deficiency

Codes address the type of functional deficiencies (code compliance, functional/space criteria, locations/siting criteria, or inadequate capacity/coverage) and their severity. Installation planners should ensure that deficiency/severity codes are assigned accurately to reflect only functionality and not condition issues.

b. Use the following guidelines when assigning severity codes:

1. Severity 1 indicates that the deficiency present has a minor impact on the use of the space for the designated function.

2. Severity 2 indicates that the deficiency present has a significant impact on the use of the space for the designated function.

3. Severity 3 indicates that the deficiency present severely restricts the use of the space for the designated function.

4. Severity 4 indicates that the deficiency present critically restricts or prohibits the use of the space for the designated function.

(a) Severity code 4 should rarely be used. For a single use facility, it will cause the facility's configuration rating to be 0.

(b) Severity Code 4 should only be assigned to a facility in the rare instance the facility or area of the building, section, or system component should not be in use and has been vacated or abandoned. If Severity Code 4 has been assigned to a facility utilization record, then this utilization space should be identified as "Vacant" in the Reference column on a Facility Planning Document and have a Disposition Planning Action assigned, per NAVFAC P-78.

c. Questions concerning the Configuration Rating should be directed to Ms. Sandy Dunn, NAVFAC HQ AM2, commercial (757) 322-8294, or e-mail sandra.k.dunn4.civ@us.navy.mil.

2.2.5.8.Updating the Capacity Rating

a. The Capacity Rating is calculated using the following formula: (Existing Assets/Basic Facility Requirements (BFRs)) x 100, rounded to a whole number, for the applicable UIC, planning area, and category code. The calculation is based on the Primary unit of measure, instead of the DoD unit of measure. Existing Assets and BFRs are obtained from the iNFADS Planning Module. For all MILCON and Special Projects, Installations are required to ensure that the applicable BFR and Facility Planning Document are up-to-date and uploaded in the iNFADS Planning Module and also PAX.

b. A Capacity Rating of 100 indicates the tenant has sufficient facility space of a particular use category code to meet its mission requirement.

c. A Capacity Rating less than 100 indicates the tenant has insufficient space of a particular use category code to meet its mission.

d. A Capacity Rating greater than 100 indicates the tenant is occupying or using more space of a particular use category code than what is needed to support the mission requirement.

e. Questions concerning the Capacity Rating should be directed to Ms. Sandy Dunn, NAVFAC HQ AM2, commercial (757) 322-8294, or e-mail sandra.k.dunn4@us.navy.mil.

2.3. Region Submissions & Briefs

a. Regions will assess and prioritize projects in accordance with Section 6.

b. Regions shall brief projects in accordance to the below:

i. Un-programmed POM27 SCFT IIP-WG IIP requirements will automatically roll over in POM28 as follows (FY32 requirements will be considered new inserts for the POM28 FYDP):

POM27 SCFT IIP Req. Year	POM28 Rollover
FY27	FY28
FY28	FY28
FY29	FY29
FY30	FY30
FY31	FY31

ii. To balance SCFT IIP-WG efforts with the resourcing profile, the number of projects a Region may brief is limited to only mission critical emergent or accelerated projects within FY28 & FY29 as well as new requirements in FY32 with a validated MND. Requests for re-briefing of projects within FY28 & FY29 will be at the discretion of the SCFT IIP-WG provided a valid justification is submitted detailing significant changes to project scope or mission impacts.

iii. If a project claims a cost savings in the Operational Cost scoring criteria, justification must be included in the detailed cost analysis worksheet included in Appendix D.

Installations shall coordinate project development with supported Commands and Tenants with missions impacted by the projects. Installations will identify the Lead Proponent using the tables included in the POM28 Project Development and Assessment Guide. Installations must ensure the appropriate Lead Proponent is identified. Enterprise Stakeholders (i.e., TYCOMS and SYSCOMS) shall identify and capture readiness impacts and sustainment metrics in applicable planning documents to inform SCFT IIP-WG prioritization and OPNAV funding decisions.

2.4. Project Submission Deliverables/Requirements

All stakeholders shall adhere to the deadlines for submissions as outlined in the CNIC N4 Facility Investment Guidance for POM28, Table 1 (POM28 CNIC Guidance Dates). Obtaining timely Lead Proponent/WE/P and other stakeholder prioritization underpins accurate RMIG assessments and timely submission to CNIC. The Region's project assessments in the five-year investment plan shall include all requested information such as the CCDR and Lead Proponent/WE/P Priorities and DL scores.

2.4.1. Requirements Data Sheet (RDS)

CNICNOTE 11000, reference (g), modifies the Work Induction process to limit planning efforts to be spent on requirements that have a high probability becoming a programmed project. For POM28, only minimal project requirements will be entered into PAX until the full Requirements Data Sheet (RDS) is required in POM29.

- Block 1-8 required inputs.
- Block 9 primary and known supporting facilities
- Block 11 Project Text and Impact if Not Provided.

2.4.2. Preliminary Briefing List (PBL)

Appendix F provides a template for the PBL. Projects submitted on the PBL should include the full 1-N list of projects with ONLY those being briefed identified in the corresponding *Briefing Submission* column. This project list will be what the SCFT IIP-WG Program Manager will utilize to build POM28 briefing packages. Regions shall brief projects in priority order.

CNIC N46 will provide a list of projects in Appendix G that were added by the LOE leads in POM27 as an exception to add to the briefing list so they may receive a score and included on the overall 1-N POM28 list. Additional projects that the IIP-WG does not see on this 1-N PBL can be requested to be briefed to ensure they receive a DL score as well.

2.4.3. Mission Need Date (MND)

Appendix H documents the official Mission Need Date (MND) definition utilized by the SCFT IIP-WG, as provided below:

> *The date by which the Supported Commander requires facility infrastructure and all facility outfitting in place to support a specific capability or requirement. The MND must have some documented basis, e.g. arrival of ships, aircraft, personnel, equipment; established Ready for Training (RFT) date; or required life/safety or functional modifications. The Supported Commander defines the MND.*

All requirements must have a validated MND and MND justification statement providing clear documentation that project requires funding in a specific year. MNDs and justification statements will be entered into the IPL module upon project submission. A MND can be Late to Need (LTN). CNIC N46 will conduct a thorough review of all MND justification statements prior to a requirement being included on the IIP.

Sample MND justification statements will also be provided in Appendix H.

2.4.4. Lines of Effort (LOE)

All requirements on the IIP will be assigned one of the seven (7) Lines of Effort (LOEs) outlined by the SCFT. Each LOE is categorized based on the criteria of that particular functional group. Appendix I documents the definition and business rules for assigning LOEs to project requirements. The SCFT IIP-WG will conduct a thorough review and official binning of projects into LOE buckets during IIP development.

2.4.5. Risk Assessment Categorization

Appendix J provides definitions for five (5) Risk categories identified for facility investment requirements:

1. Operational (OPS)
2. Institutional (INS)
3. Safety (SAF)
4. Reputational (REP)
5. Regulatory (REG)

Regions shall provide a (1) **Risk Category &** (2) **Justification Statement** for all projects within the POM28 (FY28-FY32) FYDP that are categorized as "**High** Risk" based on Tables 1 & 2 in Appendix J Statements will begin with a 3-letter alpha abbreviation, followed by a brief statement detailing why the project is associated to that Risk Category.

Ex. *"OPS - '…justification statement...'"*

Risk category and justification statement shall be entered into the *Facility Information Comments* block of the IPL Module.

2.5. Phase 1 IIP Urgency Review

Following the initial POM28 SCFT IIP-WG evaluation using the Decision Lens algorithm, a second pass review of requirement MND shall be conducted on all projects. A project's Phase 1 recommended execution year within the POM28 five-year IIP will be informed by the project's MND and subsequent required programming year, DL score, known issues, Regional inputs, and the POM27 OPNAV SCFT Infrastructure Capability Plan (ICP).

2.6. Point of Contact

CNIC point of contact regarding this matter is Lisa Reifschneider (202) 433-3710 or email lisa.n.reifschneider.civ@us.navy.mil.

3. Military Construction (MILCON)

3.1. MILCON Project Development

a. Installations and Regions shall seek non-MILCON solutions to the maximum extent possible. Alternative solutions include but are not limited to: Operations and Maintenance, Navy (OMN)

repair and conversion as allowed by reference (a) and (g), non-facility solutions like shift work, hot-desking, etc.

b. As noted in reference (g), and further described in references (p) and (q), alternative construction methods should be considered.

c. Regions are responsible for integrating all MILCON requirements into an integrated five-year investment plan, regardless of briefing status. Appendix K contains the baseline for the POM28 SCFT MILCON IIP; the baseline was generated by rolling project forward from the POM27 IIP. ALL MILCON requirements in the region five-year investment plans MUST be prioritized in the IPL module, regardless of briefing status.

1. POM-28 submitted MILCON requirements may include those submitted at a "Requirements Data Sheet" level of development, or those previously further developed to the prior SMIG PRI level. As described in reference (o), requirements development to an RDS level with initial planning will be approved before beginning DD Form 1391 development and additional advanced planning. For POM-28, RDS-level information includes entry of the following data fields into PAX:

    - Block 1-8 required inputs.
    - Block 9 primary and known supporting facilities
    - Block 11 Project Text and Impact if Not Provided.

2. As a result of the POM28 SCFT evaluation and prioritization process, a list of MILCON projects to be further planned and developed will be provided to the Regions and NAVFACHQ. Installations and Regions shall prepare projects in accordance with references (a), (r) and (s) to ensure project development is at the right level for inclusion in the POM28 program. Note, requirements (including DoD 7000.14-R FMR) for project submission to FMB remain, and it is expected projects are fully supported with all required documentation prior to submit, to include a DD Form 1391.

3. Supporting document updates are not required for rollover projects until such time the project is authorized for Budget PRI Authority. BFRs do not need to be recalculated unless there is a change in the project scope or requirement. In general, previously submitted projects shall: escalate cost, ensure proper association with the IPL, verify contingency in accordance with NAVFAC guidance, and verify IFOM data is current. See reference (c). for guidance regarding PAX and the IPL.

d. Regions must consider Combatant Commander (CCDR)/Navy Component Command (NCC), Lead Proponent and other priorities when developing projects. Regions shall ensure these stakeholders are given the opportunity to participate in the Region Mission Integration Group (RMIG) project assessments.

e. Reference (t) identifies geographic locations requiring the use of austere standards. Regions shall apply those standards as defined in reference (u) to the maximum extent possible or provide supporting information explaining why austere standards were not applied at the identified locations.

3.2. Budget Project Readiness Index (Budget PRI)

a. Projects should be available in PAX as a DD Form 1391 prior to Budget PRI Authority issuance. Budget PRI spans both the advanced planning and the preliminary design phase of MILCON development.

    1. Projects approved by the Shore CFT and recommended for Budget PRI will be assigned a NAVFACSYSCOM Project Manager. The Project Manager shall oversee and coordinate the funding and execution of advanced planning, environmental documentation, design, and construction.

    2. Projects that receive Budget PRI approval as may be audited following completion of the planning charrette. BFR and Facilities Planning Document (FPD) supporting documentation must be loaded in PAX in order to stand scrutiny of a NAVFAC HQ PDC assessment and audit by the Naval Audit Service. The audit will focus on the source of requirements and calculation accuracy.

    3. Planning & Engineering Studies. A clear estimate of what is required to achieve substantial completion of Advanced Planning is required. Indicate the time and cost of required project planning studies, in-house FP labor cost for Planning, Design & Construction Directorate to support Budget PRI not covered by MILCON-Design (MCON-D) funds, and environmental requirements.

    4. No projects shall be permitted to proceed to Budget PRI Authority without CNIC and OPNAV's consent. Projects recommended for Budget PRI Authority with OPNAV N4 as the resource sponsor shall submit a request for centrally managed FP funds to CNIC MILCON and the assigned NAVFAC HQ Program Manager. This document shall be uploaded to PAX as an attachment to the Proj Det ID. The Project Manager will coordinate requests for FP with CNIC HQ MILCON. All other projects recommended for Budget PRI development shall request funding for advanced planning from the project's resource sponsor or the NAVFAC Integrated Product Support (IPS) team.

    5. Customers external to the CNIC Enterprise may fund a project's advanced planning for Budget PRI upon written concurrence from CNIC N46. Approval for an external customer to fund the advanced planning portion of Budget PRI does not automatically approve the project for Budget PRI Authority (BPA). External funding will not automatically accelerate or improve a project's likelihood of early programming.

b. NAVFAC Planning, Design and Construction (PDC) Project Managers must ensure all elements of Budget PRI are met and supported by credible and complete documentation.

c. Environmental Planning and Conservation Resources impacts must be considered. See Section 3.4 for specifics regarding environmental planning.

d. Factors to consider when developing projects to Budget PRI:

1. Site Approval is required for Budget PRI certification, to include Category (A) as a minimum. The overall intent is to ensure site is identified and consistent with installation development plans.

2. BFR and FPD. Project submissions shall include both FPD and signed BFR or other supporting justification or requirements study (if no BFR is required). For example, a utility project should have a future loads study in lieu of BFR. FPD/BFR documents attached to the PAX Proj Det ID are not a substitute for the data that needs to be in iNFADS.

3. Mission Need Date. Ensure completion and accuracy of Block 11 of the DD1391 "Requirements" section to include all relevant justification data, dates, explanations and mission requirements, including but not limited to: Initial Operating Capabilities (IOC) dates; Mission Need Dates; unit or system stand-up dates; ship, aircraft or equipment delivery dates; important compliance dates.

   All New Platform projects shall include program deadlines, including IOC and a narrative showing when BOD is required allowing outfitting of the facility, post construction, is required to meet customer needs. Confirm all new platform projects with OPNAV N9I and CNIC WEAOs via CNIC MILCON team. Articulate major milestones including site approval, NEPA, and other requirements that could impact schedule. Identify potential showstoppers, mitigations, and work-arounds.

4. Project Validation. Ensure project requirement has been assessed through the master planning process outlined in UFC 2-100-01 Installation Master Planning, and included or will be included in the Installation Development Program of an Installation Development Plan or Area Development Plan that is supported by CNIC leadership.

5. Shore Facility Planning System (SFPS). Ensure project scope development utilizes the SFPS to validate each project.

6. Economic Analysis. Ensure the costs utilized in the Economic Analysis remain updated.

3.3. MILCON Funding Terminology

For the purposes of this guidance, MILCON requirements shall be identified based on the stages of funding identified in **Table 4**:

Funding Term	Definition	Source Document
Programmed	Projects included in the most recent PB submission (OSD Lock).	Current OSD Lock
Unprogrammed	Projects <u>not</u> in the most recent PB submission (OSD Lock).	
Locked	Projects included on a current working submission (N80 or FMB Lock) for the upcoming PB.	Current N80 Lock or FMB Lock
Planned	Not a specific reference to a particular funding status (can be programmed or un-programmed). A project may be considered planned when at various stages of development, programming or budgeting (e.g. when included in an Installation Master Plan, when included in the Phase 1 or	

	Phase 2 IIP, when included in the POM, or when included in a particular year of budget controls.	
Funded	Projects that have been authorized and appropriated.	NDAA
Unfunded	Projects that have not been authorized and appropriated.	

Table 4: MILCON Funding Terminology Definitions & Source Documents

3.4. Environmental Planning

a. Environmental documentation requirements shall be identified during the advanced planning phases and continually monitored through the project's development.

b. Completion of Appendix L, Environmental Planning and Conservation Resources Impacts Checklist, shall be used to further evaluate projects for the appropriate level of environmental planning and impacts to conservation resources during Budget PRI development. NAVFAC PDC Project Planners shall ensure that the completed checklist is attached to the DD1391 in PAX. Additionally, pertinent environmental information shall be included within Block 12 of the DD1391 in accordance with updated NAVFAC Consistency Review Board guidance.

c. Project environmental planning must be on track to complete by May of BY-2 leading to a signed Record of Decision, Finding of No Significant Impact, Memorandum of Negative Decision, or Categorical Exclusion. If the project's environmental planning action cannot complete on schedule, ensure that the project's DD1391 states this as well as milestones and mitigating information for the SCFT IIP-WG to take into account when assessing the project.

3.5. Cost-Shared Projects

Projects to be cost-shared with other services or entities shall highlight that information in their brief, if known. Clearly explain the cost-share arrangement and timing, if known.

3.6. Points of Contact

CNIC point of contact regarding this matter is Claire Cary, commercial (202) 433-4415, or e-mail claire.l.cary.civ@us.navy.mil.

4. Facility Sustainment, Restoration & Modernization (FSRM)

4.1. FSRM Project Submissions

Regions are responsible for integrating all valid FY28 through FY32 FSRM Special Projects into a five-year integrated priority list. Appendix M contains the baseline for the POM28 SCFT FSRM IIP; the baseline was generated by rolling project forward from the POM27 IIP.

a. Special Projects programmed in FY27 of the approved POM27 SCFT IIP shall be excluded from POM28 consideration.

b. Special Projects programmed FY28 and FY29 of the approved POM27 SCFT IIP will automatically be carried into their respective fiscal year in the POM28 SCFT IIP. Only projects with significant change in scope or mission impact can be requested to be re-briefed

with IIP-WG approval. See reference (c) for guidance regarding IPL prioritization and best practices.

c. All un-programmed Special Projects, to include projects carried over from the POM27 SCFT IIP as well as new requirements, must be included in the Region's Integrated Priority List (IPL) module. Per Section 6, all projects in the IPL MUST be scored, evaluated and prioritized by the respective Region Mission Integration Group (RMIG) using the Decision Lens Facilities Investment Model provided in Section 2, in order to provide a comprehensive 1-N list of valid requirements.

1. Installation Commanding Officers shall only plan and submit projects that are validated as a solution to a capability gap identified through a standard planning process, including Regional and Installation planning documents, specialized planning studies, and critical utilities infrastructure improvements. Planning efforts are NOT to be expended based solely on an Installation Commanding Officer's desire.

2. Only projects with a current working estimate (CWE) of $2M or greater will be considered by the SCFT IIP-WG for CNIC centrally managed SRM funding; projects with a CWE less than $2M must be funded from local controls.

4.2. Airfield Pavement

Airfield pavement restoration projects shall have a completed and recent PCI survey and be graded based on PCI with results uploaded into PAX. Actual PCI ratings shall be used to evaluate the projects in alignment with the criteria outlined in Section 2. Regions shall provide the date of last survey during Region briefs. This will assist the SCFT IIP-WG in the overall assessment of the project and contribute towards the Readiness Support score within the Strategic Alignment and Guiding Principles.

4.3. FSRM Project Titles

Project titles must be as descriptive as possible and address the prominent scope, building, component, and system. For example, "Repair Roof of Building 13" is not acceptable. However, "Repair F/A-18 AIMD Roof - Bldg 13" is acceptable.

4.4. FSRM Funding Terminology

For the purposes of this guidance, FSRM requirements shall be identified based on the stages of funding identified in **Table 5**:

Funding Term	Definition	Source Document
Programmed	Projects within PBIS controls across the FYDP of the most recent PB submission.	Shore CFT Infrastructure Investment Plan (IIP) associated with the most recent PB submission.

Unprogrammed	Projects that are not on the Constrained IIP. These projects will compete for funding in the next POM cycle.	Shore CFT IIP-WG Unconstrained IIP (Phase 1)
Locked	Projects programmed within the first 2 years of Programming FYDP. *(Current FY +1 and +2)*	Shore CFT Infrastructure Investment Plan (IIP) associated with the most recent PB submission.
Planned	Projects on Shore CFT IIP-WG Unconstrained (Phase 1) IIP.	Shore CFT IIP-WG Unconstrained IIP (Phase 1)
Funded	Funds for the project have been distributed from CNIC HQ to CNIC Region. *(Execution year specific, & not tied to programming status)*	Centrally-Managed Special Projects Program (CMP)
Unfunded	Funds have not been distributed to the CNIC Region for project execution. *(Execution year specific, & not tied to programming status)*	Centrally-Managed Special Projects Program (CMP)
Baseline	Projects that make up 100% of a Fiscal Year's projected annual control. These projects are programmed in the current FYDP, have design authorization and funds reserved. *(Execution year specific, & not tied to programming status)*	Centrally-Managed Special Projects Program (CMP)
Swing	Projects that make up approximately 125% of a Fiscal Year's projected annual control. These projects are programmed and have design authorization, but do not have funds reserved. (*Execution year specific, & not tied to programming status)*	Centrally-Managed Special Projects Program (CMP)

Table 5: FSRM Funding Terminology Definitions & Source Documents

4.5. Program Elements (PE) Guidance

4.5.1. Fleet & Provider

The Fleet & Provider Program Element captures multiple Fleet priorities across multiple shore capability areas (SCA) and Navy initiatives. Currently, there is $1,799M for Fleet & Provider in FY28-30. This includes targeted investment areas of Climate and Energy Resiliency, Deployment of Non-Tactical Zero Emission Vehicles, and N98.

4.5.1.1. Climate and Energy Resiliency

Regions that have projects supporting infrastructure resiliency or efficiency shall provide FY28-32 requirements to the SCFT IIP-WG on their IPL. Project briefing, scoring, and evaluation will be reserved for projects outlined Section 2. The majority of utility projects will fall within this category. Additionally, projects that close energy gaps identified as part of the Installation Energy Program Summary (IEPS) and Energy Project Selection Process (EPSP) should be briefed to the SCFT IIP-WG for review and assessment in

accordance with Section 8. Currently, there is $437.9M for Climate and Energy Resilience in FY28-30.

4.5.1.2. Deployment of Non-Tactical Zero Emission Vehicles (ZEV)

Regions that have projects supporting ZEV infrastructure will continue to identify and prioritize projects via CNIC N46 and NAVFAC Public Works project pipeline taskers. Currently, there is $37.5M for ZEV infrastructure in FY28-30.

4.5.1.3. N98

Regions that have projects vetted and prioritized for resourcing by N98 shall provide FY28-32 requirements to the SCFT IIP-WG on their IPL. Project briefing, scoring, and evaluation will be reserved for projects outlined Section 2. Currently, there is $26.9M for N98 priorities in FY28-30.

4.5.2. Unaccompanied Housing (UH)

The CNIC UH Program will prioritize barracks projects in SCFT Level of Effort #5 locations. Currently, there is $103.5M for Unaccompanied Housing in FY28-30. UH facility projects must eliminate all master system deficiencies for FAILING/POOR condition UH Buildings (Barracks and Dormitories) and have a FAILING/POOR condition rating (CI) score of (69) or below to be prioritized by CNIC N93. MyNavy HR will continue to prioritize all dormitory projects in their AOR.

UH project 1391s and project scope must result in a facility that fully meets OSD Design Standards, GAO as well as FY24 NDAA standards. Further adherence to FC 4-721-10N published 19 May 2022 and include the following:

- Title clearly identifying the elimination of Failing/Poor
- Condition Rating (CI)
- Official iNFADS facility number
- Scope specifying which major building systems and modernization/building code deficiencies are resolved to deliver a combined Good CI score (100-90) upon completion
- Design type and number of bedrooms to be returned

UH Special Project 1391s of RDSs to eliminate inadequate conditions do not require a statement of personnel requirement/deficit. Neither Budget Year Housing Requirement Module (HRM) R-19 data nor Basic Facility Requirement (BFR) data need to be included in 1391 Blocks #10 or #11.

4.5.3. Nuclear Deterrence Enterprise Review (NDER)

Regions (CNRNW and CNRSE) that have NDER requirements within their Area of Responsibility (AOR) shall provide FY28-32 requirements to the SCFT IIP-WG on their IPL. Project briefing, scoring, and evaluation will be reserved for projects outlined Section 2. Currently, there is $148.6M for NDER in FY28-30. NDER projects will be determined by and in close coordination with Strategic Systems Program (SSP).

4.5.4. Naval Education Enterprise (NEE)

Regions (CNRMA, CNRNDW and CNRSW) that have NEE requirements within their AOR shall provide FY28-32 requirements to the SCFT IIP-WG on their IPL. Project briefing, scoring, and

evaluation will be reserved for projects outlined Section 2. The majority of utility projects will fall within this category. Currently, there is $653.7M for Naval Education Enterprise in FY28-30.

4.5.5. Medical Readiness (MED)

Regions that have Medical Readiness requirements within their AOR shall provide FY28-32 requirements to the SCFT IIP-WG on their IPL. Project briefing, scoring, and evaluation will be reserved for projects outlined Section 2. The majority of utility projects will fall within this category. Currently, there is $123.9M for Medical Readiness in FY28-30. Medical Readiness projects will be determined by and in close coordination with Naval Medical Enterprise (NME).

4.5.6. Demolition (DEMO)

Regions that have Demolition requirements within their AOR will continue to identify and prioritize project requirements via CNIC N43 and N46 project pipeline taskers. Currently, there is $495.8M for Demolition in FY28-30. Program guidance will be promulgated SEPCOR to address facility footprint reduction requirements in support of Infrastructure Divestment and Consolidation initiatives across the Shore.

4.6. Point of Contact

CNIC point of contact regarding this matter is Will Sanford, commercial (202) 433-0118, or e-mail joseph.w.sanford6.civ@us.navy.mil.

5. Unspecified Minor Construction (UMC), Laboratory Revitalization Program (LRP) & Revitalize Defense Industrial Base Facilities (RDIBF)

5.1. Overarching Guidance

5.1.1. Area Cost Factor (ACF) Adjustment

a. UMCs using section 2805(2) (d), LRPs citing section 2805 (d), and RDIBFs have a $9M upper threshold (not to exceed $14M after ACF).

b. Projects using OMN UMC authority (2805 (c)) have a $4M upper threshold unless adjusted by an applicable ACF. The notification threshold is $4M, therefore packages must be submitted for those projects.

c. Adjusted thresholds shall be calculated using the ACF of the FY prior to the FY of award for each location as published in the Unified Facilities Criteria (UFC) 3-701-01, DoD Facility Pricing Guide.

d. Adjustments for any given project shall only be made for those locations where the DoD ACF has a value greater than 1.0. The ACF adjustment is capped at $14M.

    1. Example 1 – a project in Guam would have an adjusted limit of $14M ($9.0M x 2.57 (ACF) = $23.13M).

2. Example 2 – a project in Mayport, FL, would retain a limit of $9M ($9.0M x 0.87 (ACF) = $7.83M).

3. Example 3 – a project in Patuxent River, MD, would have an adjusted limit of $9.54M ($9.0M x 1.06 (ACF) = $9.54M).

5.1.2. Mitigating Risk of Exceeding Threshold Limitations

Projects should target a cost of at least $1M under the final adjusted threshold to mitigate the risk of exceeding fiscal constraints. Projects that are within the $1M of the threshold (ACF adjusted, if applicable) shall include a cost mitigation statement Appendix N at time of briefing and/or notification. A UMC project may still be rejected if CNIC feels there is a high risk for cost growth post award. Final approval for projects with estimates within $1M of the threshold may be held until after the receipt of bids.

5.1.3. Required Information

In order to meet the requirements of OPNAV and ASN approvers, the following information must clearly be identified within the project packages:

a. DD1391s must include identify if the construction site is within the 100-year flood plain. If within the flood plain, the following statement must be included "This project falls <within/partially within> a flood hazard area representing <Summary description of the defining flood event or cause>. This is a <non-mission essential/mission essential> facility. The design flood elevation is approximately <XXX.X> feet above the existing site elevation at its lowest point. This flood risk will be mitigated as described in the description of construction." A map of the flood plain shall be included with the project package.

b. DD1391s must address the Randolph-Shepard Act.

c. DD1391s must include cyber-commissioning as a separate line item.

d. DD1391s should be formatted in accordance with reference (u).

5.2. Unspecified Minor Construction (UMC)

Per reference (v) and (w), a UMC project is a Military Construction (MILCON) project that has an approved cost greater than $4M and less than or equal to $9M ($14M with ACF adjustment).

5.2.1. Project Development

a. If a project is determined to be over the Operations and Maintenance, Navy (OMN) minor construction limit ($4M) but under the adjusted UMC limit ($9M, not to exceed $14M), the project can be a candidate for UMC funding and should follow the outline in reference (v). Note that the ACF adjustment also applies to the $4M minor construction threshold, which shall be leveraged to provide additional buying power using OMN where applicable.

b. As noted in reference (o), and further described in references (p) and (q), alternative construction methods should be considered.

c. In order to easily identify UMC projects, all UMC projects shall utilize the letter U as a suffix to the project number (i.e. P123U).

d. Installation leadership determines which UMC qualified projects will be submitted to the Region for consideration during the Region Mission Integration Group (RMIG). The RMIG consolidates and prioritizes its Integrated Priority List (IPL) for consideration and final selection by the annual SCFT IIP-WG UMC Board.

e. For those projects being forwarded to the Region, the Installation shall link the INSTL/PWD_FINAL (POM Cycle "UMC", Fiscal Year 2027) DD-1391 in PAX to the IPL module. Military Construction, Naval Reserve (MCNR) UMC candidates shall be linked in the IPL as well. All projects shall use a Design Build strategy. Projects with a compelling reason (e.g., complexity, cost, scope, etc.) for a Design Bid Build strategy must highlight such during brief to the SCFT IIP-WG WG to ensure sufficient MCON design funds are programmed. The Current Working Estimate (CWE) must take into account all anticipated costs (e.g., use of Design Build or Small Business Acquisition tools). The following contingency structure shall be used for UMC 1391's:

    1. 20% when linked and submitted in IPL

    2. 20% when ready/selected for FDA

    3. 10% when submitted with 2805 Notification Package

f. ARE staffs shall review briefing materials and DD-1391s for accuracy and completeness prior to submission of their IPL. All UMC requirements are required to be prioritized, regardless of whether they are being briefed. This allows CNIC to maintain a valid list of requirements to justify the level of funding in the out-years.

g. UMC projects verified as being resourced by OPNAV N9 do not need to be briefed; however, they will be scored by the SCFT IIP-WG.

h. Projects previously approved for UMC funding that are not executed within a reasonable timeframe (normally two years) will not be held indefinitely within the UMC program. Upon notification from CNIC N46, these projects will be required to re-compete for future funding; re-submission will count against a Region's quota.

i. Changes in one project will not be allowed to impact other projects within the UMC program. Potential changes that may result in a project being removed from the UMC program include:

    1. CWE crosses UMC threshold prior to award; projects will not be held with the assumption that there may be a change to the ACF or UMC authorization.

    2. Substantial scope or cost growth (normally 25%) beyond the SCFT IIP-WG submission, even if the result remains below the UMC threshold

j. The previous FY's ACF must be used when calculating the revised threshold for award. Since no table has been issued for FY25, all projects shall use the current ACF adjustment table (Sep 2024 UFC-3-701-01-2002-C5).

5.2.2. Project Selection

a) The SCFT IIP-WG UMC Board is held annually in February. This board will be used to review and approve projects for the following FY in accordance with the process outlined in Appendix O. Regions will brief their top priorities based on the limits provided in **Table 6** below. The following are exempt from Region limits are the Region's top MCNR UMC project and project briefs requested by the SCFT IIP-WG. Projects that were selected for FY26 funding, but not funded due to funding constraints, do not need to be re-briefed. These projects will be placed at the top of the FY27 approved list. The SCFT IIP-WG assesses and prioritizes projects briefed by the Regions using the approved SCFT IIP-WG assessment criteria and DLW model.

Region	**Quota**
CNREURAFCENT	2
CNRH	2
CHRJ/K	2
CNRMA	4
CNRNDW	2
CNRNW	2
CNRSE	4
CNRSW	4
JRM	2
TOTAL	**24**

Table 6: UMC Regional Briefing Quotas

The SCFT IIP-WG uses the UMC prioritization list to determine how many projects can be funded within the Total Obligation Authority (TOA) for the FY and recommends those projects for execution.

b) CNIC N46 distributes the results upon completion of the UMC board. This distribution also outlines all expected dates for DD-1391 development and final submission to CNIC. Please refer to Table 1 for tentative dates.

c) Projects are expected to have completed all advanced planning prior to submitting for consideration. Projects selected for funding should have a Region Valid Final DD-1391 ready in PAX for issuance of Final Design Authority (FDA) within 7 days. Preliminary Design Authority is not required for UMCs and will not be issued. FDA provides the deliverable DD-1391 required for Congressional Notification of UMC projects. Projects seeking a change in design strategy after selection shall request approval from CNIC via email.

d) NAVFACHQ PDC issues FDA for projects recommended by the SCFT IIP-WG. NAVFACHQ PDC and the Region PM should immediately be notified if, at any time during FDA, it appears the cost will exceed the UMC threshold or problems emerge which could prevent Budget Year execution. The Region and NAVFACHQ PDC shall work with the CNIC UMC Headquarters Program Director to find resolution including reducing scope, stopping design, or shifting the project to the MCON program.

5.2.3. Funding Terminology

For the purposes of this guidance, UMC requirements shall be identified based on the stages of funding identified in **Table 7**:

Funding Term	Definition	Source Document
Programmed	Projects that are selected by the Shore CFT IIP-WG UMC Board and fall within the UMC controls established in the PB submission	
Unprogrammed	Projects that are not selected by the Shore CFT IIP-WG UMC Board.	
Planned	Not a specific reference to a particular funding status (can be programmed or un-programmed). A project may be considered planned when at various stages of development, programming or budgeting (e.g. when included in an Installation Master Plan, when selected or not selected by the Shore CFT IIP-WG, when awaiting Congressional notification completion).	
Funded	Projects that have completed the Congressional Notification period and received funding for execution.	
Unfunded	Projects that have not received funding for execution.	

Table 7: UMC Funding Terminology Definitions & Source Documents

5.2.4. Project Execution

a) A DD-1391 submitted to status level Program Final and all supporting documentation (e.g., environmental, site approval and equipment list) is required in PAX. Program Final DD-1391's represents budget level scope, schedule a cost reflecting, at a minimum, a Class 3 parametric cost estimate.

b) NAVFACHQ MILCON PM validates accuracy and quality assurance of the Program Final DD-1391 in accordance with CRB guidelines and submits it to status level Budget Final DD-1391. CNIC N46 requests the RE signature on Budget Final DD-1391 for inclusion in the Congressional Notification Package.

c) Award of UMC projects is expected in the FY they are approved. In the event that additional funds are required (during design or execution), Regions shall apprise CNIC N46 as soon as it is known and confirm approval to proceed. If a project requires cancellation or is anticipated to exceed the UMC threshold, the RE shall provide an email to CNIC N4, with a copy to CNIC N46, indicating the rationale.

5.2.5. Out-of-Cycle Submission

For emergent requirements, Regions may submit a valid MCON or MCNR UMC candidate with a Region Valid Final DD-1391, at any time without waiting for the annual SCFT IIP-WG UMC Board. Regions shall advise CNIC N46 of the emergent requirement as soon as it is known.

5.3. Laboratory Revitalization Program (LRP) & Revitalize Defense Industrial Base Facilities (RDIBF)

LRP projects construct facilities in direct support of a specified naval laboratories, to include research, engineering, and development centers as well as test and evaluation activities. Similarly, RDIBF projects construct facilities in direct support of working capital funded Department of Defense depot, arsenal, shipyard, or plant facilities located within the United States.

5.3.1. Project Funding

a) LRP projects are funded using funds available for the operations and maintenance of a lab facility which includes Research, Development, Test and Evaluation (RDT&E), Navy Working Capital Funds (NWCF), Operations and Maintenance Navy (OMN), or from established customer fees approved and made available under 10 USC § 4123. The FY23 National Defense Authorization Act (NDAA) increased the LRP project threshold to $9M, not to exceed $14 with an ACF adjustment.

b) RDIBF projects are funded with Working Capital Investment funds and executed utilizing 10 USC § 2805 procedures and guidance as prescribed by reference (x). The RDIBF threshold is $9M plus ACF.

5.3.2. Project Development

a) LRP and RDIBF project documentation must be standalone, complete, and usable. Projects normally include a new footprint component with or without non-severable repair work.

b) Projects that qualify under the new conversion authority will not typically be approved as an LRP or RDIBF. Note that approval paperwork for SRM funded repair is higher at $7M.

c) Severable SRM funded work, whether new footprint or repair, shall not be submitted together with the LRP or RDIBF approval package (i.e., they should not be mixed or combined into one project for reporting purposes to Congress, even if the intent is to contract together). When applicable, submit a separate package and alert CNIC N46 accordingly.

d) All LRP and RDIBF requests are to be submitted to CNIC via a letterhead request from the requesting activity via their respective PWD and ARE Office. The letterhead request shall be endorsed by the Installation Commanding Officer and RE prior to submission to CNIC for approval. The letter must state which funds will be used for the project.

e) A RE signed Region Valid DD-1391 is required to be submitted to CNIC N46. RE signature is required either in PAX or by ink on the DD-1391 and cannot be delegated below the RE. The RE is certifying that the DD-1391 is complete and all supporting documentation (e.g., environmental documentation, site approval) is attached in PAX.

f) The project request and supporting information shall be submitted using the approved templates to CNIC via a newly designed MS Teams Page. Additional guidance will be provided when the page is functional.

g) LRP and RDIBF projects require written CNIC Authority to Advertise as well as Authority to Award. Since packages typically take 6-8 weeks to clear CNIC, OPNAV, and ASN staffing, plus require a 14-day Congressional notification period, projects targeted for EOY award should be submitted NLT May 31st each year. Earlier submission is highly encouraged.

h) Projects should seek to produce a net reduction in administrative space. Projects constructing new administrative space should identify any corresponding reduction in administrative space in other facilities or the elimination of leased administrative space. If a net reduction is not possible, justification for the growth in administrative space must be provided. Justification should include what changes in mission are driving the increase in administrative space, and should include where the billets requiring additional administrative space are currently located.

5.4. Point of Contact

CNIC point of contact regarding this matter is Ms. Maureen Estruch, DSN 288-4429, commercial (202)433-4429, or e-mail maureen.a.estruch.civ@us.navy.mil.

6. Region Mission Integration Group (RMIG)

6.1. Scope

Section 6 provides the overall framework and governance for implementation of an integrated Region Mission Integration Group (RMIG) structure for the Navy Enterprise. It establishes uniform governance for generating shore investment priorities while allowing some flexibility in overall Region process. For the purposes of this guidance, only RMIGs and RMIG-Working Groups (WG) are addressed.

6.2. Purpose

The main purpose of the RMIG is to optimize effectiveness in delivering sustained and improved shore readiness to the Fleet, Warfighter and Family in support of the SCFT IIP-WG per reference (a).

6.3. SCFT IIP-WG

The SCFT IIP-WG is the senior Shore forum to enhance involvement from Lead Proponent/WE/P in Shore-based issues, to address inconsistencies or shortfalls with Shore services and support, and to advocate for improvements in Shore capabilities. The SCFT IIP-WG provides oversight and ensures the Navy Enterprise is judicious in the use of limited resources while sustaining mission-capable installations and Shore programs integral to the Navy's future vision. The overarching purpose of the SCFT IIP-WG is to assess Shore requirements and deliver a plan in which Shore based support will maximize Fleet readiness. The SCFT IIP-WG will ensure concerns are considered and will balance risk and requirements across all Enterprise missions.

6.4. RMIG

The RMIG is the shore's Region-level senior executive forum for integrated Regional decision-making and prioritization. Lead Proponent/Warfare Enterprise and Provider (WE/P) priorities and supported commander demand signals are paramount, and shall be incorporated into facilities planning to ensure shore infrastructure decisions reflect Fleet priorities. A holistic approach to evaluating mission requirements and closing mission capability gaps is needed. The RMIG must be empowered to outline goals and objectives in close coordination with Lead Proponent/WE/P

representatives. Similar to the SCFT IIP-WG and SCFT IIP-WG relationship outlined in reference (a), the RMIG-WG shall function to directly support and staff issues for the RMIG. See Appendix P and Q for RMIG best practices and collaboration levels.

a. The RMIG shall be chaired by the Regional Commander (REGCOM) or REGCOM designated representative. RMIG voting membership shall include global representatives with decision-making authority (or their designees) from resident WE/Ps and/or Navy Component Commands (NCCs). The Regional Engineer shall attend and participate in all RMIG meetings.

b. The RMIG-WG shall be made up of proxies from the RMIG and shall be chaired by the Regional Engineer or Region ED. Resident Lead Proponents/WE/P and/or NCC, N-Codes, and Installation Commanding Officers (per the Region's discretion) shall also be RMIG-WG voting members.

c. Other members to both the RMIG and RMIG-WG may include, but are not limited to, Program Directors, Chief of Staff, CNIC Headquarters N4 and/or N5 Warfare Enterprise Action Officers (WEAOs), and the Fleets.

6.5. RMIG Deliverables

The RMIG shall oversee the development of executable five-year facility programs including operational concept improvements. In addition, the RMIG shall integrate and prioritize installation requirements across the Region with inputs from all stakeholders.

a. For POM28, Regions will submit a Preliminary Briefing List (PBL) in Excel format as detailed in Section 2. Appendix F provides a template and detailed requirements for this submission.

b. RMIGs are responsible for evaluating capability gaps within the Region and reviewing the Enterprise level planning analysis, Installation Development Plans, and Strategic Laydown initiatives to deliver facility investment Integrated Priority Lists (IPL) to the SCFT IIP-WG.

c. Per Section 2, priority lists are to be managed within the IPL Module and shall be submitted sorted by the overall priority of requirements regardless of region required fiscal year by the Region Required FY. The Structural Model and Weighted Priorities (rating criteria) detailed in Section 2 shall be used to assess and prioritize all new requirements being briefed to the SCFT IIP-WG. Priorities generated by the model are a tool; Regional Commanders may deviate from model's order with final priorities being recorded in the IPL. Following prioritization, a second-pass review based on Mission Need Date (MND) shall be conducted to identify the region required program year for each project.

d. RMIGs are responsible for delivering the following IPLs following the provided template outlined in Section 2 to the SCFT IIP-WG in alignment with the POM28 Project Development and Assessment Guide:

    1. Military Construction (MILCON) IPL

    2. Special Projects (FSRM) IPL

    3. Unspecified Minor Construction (UMC) IPL

6.6. Regional Training

6.6.1. MS Teams Channel

There is a centralized channel on MS Teams designed to increase communication between the Regions and the SCFT IIP-WG. All shared documents relative to the POM submission cycle shall be posted under the appropriate POM FY folder, along with all training documents that have been provided to the Regions.

6.6.2. Annual Governance Training

Following the release of the DRAFT Guidance to the Regions, the SCFT IIP-WG will hold a series of trainings to discuss changes from the previous POM cycle. This will also be an opportunity to address inconsistencies among Regional submissions in efforts to streamline all processes and deliverables. CNIC N46 will provide an agenda of topics before the training to ensure discussions are focused and address the appropriate agenda items.

6.7. Point of Contact

CNIC point of contact regarding this matter is Lisa Reifschneider (202) 433-3710 or email lisa.n.reifschneider.civ@us.navy.mil.

7. Shore CFT IIP Development Process

7.1. Phase 1 (Unconstrained) IIP Development

As outlined in Section 2, all projects will be evaluated using the POM28 SCFT IIP Scoring Matrix with regards to Mission Alignment, Readiness Support, Operational Cost, and Severity, as well as their current Installation Figure of Merit (IFOM) ratings for Capacity, Condition and Configuration to develop a Decision Lens score. During this phase, a preliminary LOE will be assigned to each requirement for further review and confirmation in Phase 2. Additional information on the LOE Business Rules is outlined in Appendix G. The IIP will also be evaluated to ensure requirements of similar scope have been evaluated appropriately. Regional and Lead Proponent priorities will also be taken into account, as well as ensuring phased, incremented projects fall into the appropriate, consecutive FYs based on executability.

A second pass MND review will support in placing projects in the required FY. Once all requests for information (RFIs) have been reviewed, Phase 1 of the IIP development will move into Phase 2.

7.2. Phase 2 (Resource-Constrained) IIP Development

During Phase 2, the IIP will be broken out and prioritized by LOE to identify missing requirements and ensure priorities align to the LOE focus area. Missing requirements will be inserted at this stage. Once all LOEs have assigned a priority to all requirements, the SCFT IIP-WG will reintegrate requirements into a resource-constrained 1-N list for both MILCON & FSRM. This may require additional looks into requirements of similar scope/type.

8. Additional Facility Investment Programs in CNIC's Portfolio

8.1. Energy Resilience and Conservation Investment Program (ERCIP)

8.1.1. Purpose

In accordance with reference (y), (z) and (aa), this addendum provides guidance to determine energy security requirements, develop solutions to resolve gaps in critical infrastructure, and plan, develop, and execute projects.

8.1.2. General Development Guidance

a. Reference (y) outlines the three pillars aligned to Navy Installation Energy Program Summary (IEPS) holistic approach to set energy security performance benchmarks; assess and analyze energy system performance against energy benchmarks and mission requirements; and prioritize energy security projects to close gaps effectively. Prioritization of energy security gaps, conceptual solutions, and project planning, development, and execution shall be based on system deficiencies, mission requirements, and business case opportunities.

b. POM28 guidance aligns with CNIC's Installation Energy Program Summary (IEPS) process and timeline. Energy Resilience and Conservation Investment Program (ERCIP) projects are prioritized by CNIC N4 Energy and ultimately approved by the Office of the Secretary of Defense (OSD).

8.1.3. Roles & Responsibilities

a. CNIC HQ will:

1. In coordination with OSD, provide enterprise ERCIP guidance and key criteria/attributes that make a successful project.

2. Oversee NAVFAC PDC project planning, development, and execution during the appropriate program year.

3. Facilitate the SCFT IIP-WG WG to review and prioritize ERCIP projects during the second quarter of each fiscal year.

b. CNIC Regions will:

1. Ensure ERCIPs are properly coordinated with NAVFAC PDC and all stakeholders, reviewed and approved for submission by the RMIG.

2. In coordination with NAVFAC, develop conceptual project solutions for the highest priority energy security gaps in conjunction with the installation's annual IEPS submissions.

c. CNIC Installations will:

1. Identify all energy program requirements within the IEPS and submit annually NLT 30 September via IEPS Toolsuite, IEPS module.

2. Ensure ERCIPs are properly coordinated with all stakeholders, reviewed and approved by the IMIG, and integrated by the IMIG and RMIG prior to submittal.

3. Be accountable for achieving the energy security progress declared in project packages submitted to include documenting measurement and verification project savings.

d. NAVFAC will:

1. Provide support to CNIC by assisting Regions and Installations in identifying, reviewing, and validating IEPS by management of systems, data, and resources.

2. Develop viable solutions to resolve energy security gaps.

3. Upon approval, plan, develop, and execute ERCIP projects.

e. The SCFT IIP-WG will assess and validate the Navy's Shore energy security gaps for the ERCIP program during the second quarter.

8.1.4. ERCIP Project Requirements

Per reference (ab):

a. FY25 Submissions. Selected projects were submitted by OSD to Congress in February 2024. Construction and P&D funds will be appropriated in October 2024.

b. FY26 Submissions. OSD released the approved ERCIP project list in August 2024. See the N42 SharePoint site for the current list.

c. FY27 Submissions. OSD released FY27 ERCIP guidance in June 2024. CNIC submits FY26 IPL with 35% design package to OSD on or before 27 September 2024. Refer to current OSD ERCIP requirements for additional guidance for completing required documents for submission.

d. FY28 Submissions. OSD plans to release FY28 ERCIP guidance in June 2025. CNIC submits FY27 IPL with 35% design package to OSD on or before 29 September 2025. Refer to current OSD ERCIP requirements for additional guidance for completing required documents for submission.

1. Requires a DD1391 signed by the Regional Engineer. The Measurement and Verification (M&V) plan and the associated cost shall be part of the DD1391 package.

2. Requires responses to all energy resilience questions for each energy resilience project submitted.

3. Requires a project quad-chart slide be submitted for each project.

4. Requires ERA tool output submissions for all energy resilience and security projects.

5. Requires eROI output identifying a positive savings to investment ratio (SIR) and accurate payback period.

e. FY28-30 Submissions. FY28-30 IPL spreadsheet will be submitted to OSD in September 2023. Projects prioritized by the SCFT IIP-WG in February 2024 will move into further development. Regions will utilize internal resources to generate activity level DD1391s unless there is a requirement (e.g. study) beyond the internal resources' capability, at which time CNIC HQ Facilities Planning (FP) funding may be available.

8.1.5. ODASD (E&ER) ERCIP Project Selection Criteria

a. ERCIP projects must comply with OSD's annual ERCIP project selection criteria. Currently, OSD's FY27 ERCIP project selection criteria includes the following guidance on projects with the highest probability of being selected by OSD and appropriated by Congress:

1. Projects that improve energy resilience on installations listed on the DoD Mission Assurance Priority List or on a Service's submitted installation priority list.

2. ERCIP projects must address mission requirements in an Installation Energy Program Summary (IEPS).

3. Specific goals for FY27 include improvements to energy resilience and investments in technologies as follows:

(a) Microgrids with the ability to expand and incorporate new technologies over time in order to support critical mission facilities, strengthen grid resilience, help mitigate grid disturbances, and function as a grid resource for faster system response and recovery improving installation resilience.

(b) Renewable energy, clean energy, and energy storage project(s), particularly when they create a synergistic effect with other technologies, efficiency improvements and "smart" building or grid management systems.

(c) Base-load power technologies, such as geothermal and nuclear reactor generation systems connected to a microgrid for onsite energy production.

(d) Accelerated deployment of Air Source Heat Pump project(s) as demonstrated by ESTCP to support a specific building or a series of buildings.

(e) Energy infrastructure projects directly supporting Electric Vehicle (EV) charging stations.

(f) Projects in the European theater dependent on foreign sources of energy.

4. Energy Resilience (ER) and Water Resilience (WR): Contribution to energy/water resilience, energy security, and mission readiness and assurance at an installation. Projects that meet the following requirements will be prioritized over other projects:

   (a) Projects aligned to the requirements of 10 U.S.C. §2920 and that meet critical mission requirements and are the best solution to improve mission readiness and assurance at a DoD installation or DoD-owned facility.

   (b) Projects that enhance ER and generate on-site clean/pollution free energy, to include but not limited to photovoltaic (PV), wind, geothermal, energy storage, and the improvements to infrastructure.

   (c) Projects that enhance water resilience and address climate threats like managed aquifer recharge in areas prone to flooding. In addition to aquifer recharge, water resilience includes construction of water treatment plants, installation of additional water supply lines, construction of emergency water supplies utilizing reverse osmosis purification systems, desalination plants that support power plant resiliency, redundant chilled water systems, and improvements to water infrastructure.

5. Executability: Components are required to provide estimated execution data to include acquisition strategy, summary of advance planning efforts (NEPA, facility planning requirements, site approvals, cultural resource surveys, etc.) completed or underway, amount of P&D required to support development of a budget ready DD Form 1391, when and how much additional P&D is required to support final design/solicitation documents, and estimated construction contract award date. Projects that cannot be executed in FY27 will not be considered.

6. Projects that contribute to GHG reduction that include energy systems like fuel cells and battery energy storage systems, heat sinks like green or cool roofs, innovative building materials like the use of high performing sustainable concrete, the inclusion of energy efficient technology, and other emission reducing technologies and strategies.

7. Projects that create a synergistic effect: Diversification of energy technologies meaning combining different types of energy technologies, such as generation (e.g., PV, wind, geothermal, nuclear reactors, air source heat pump), storage (e.g., battery or other), and control technologies (e.g., microgrid/smart grid). Benefits should be described and quantified.

b. Other Criteria for Additional Consideration. ODASD (E&ER) considers other project criteria when evaluating project submissions. Criteria in this category are not weighted but are considered important attributes for ERCIP projects. Other criteria reviewed for additional consideration by ODASD (E&ER) during the project selection process includes the following:

1. The DoD Component priority is considered/used as a secondary discriminating criterion in the project selection process after the projects have been scored

2. A complete project package that includes all required supporting documentation noted in Section 5.2 of reference (ae).

3. Energy Conservation (EC) / Water Conservation (WC) projects: Improvements to energy/water efficiency such as life cycle cost-effective improvements in operations and maintenance efficiencies, or retrofit activities, or energy consuming devices and required support structures. ER/WR projects are prioritized higher than EC/WC. However, EC/WC projects are still a valuable part of the ERCIP portfolio. When submitted, EC/WC projects:

    (a) Must meet critical mission requirements and are the best solution to improve mission readiness and assurance at a DoD installation or DoD-owned facility.

    (b) Must include SIR value and the Simple Payback: An energy investment's "Simple Payback" is the time it would take to recover the initial investment in the project by utilizing energy savings generated by the project. Payback = Cost of project / Energy savings per year.

4. Defense Climate Assessment Tool (DCAT) Results: Component assessment of 30- and 50-year scenarios that will impact the proposed infrastructure project and the missions supported by the investment. Components will use DCAT or an equivalent Component tool when developing the IEPS, and inform ERCIP projects of known hazards (energy and water).

5. Projects that support and enhance the mission of other tenant agencies on an installation.

6. Energy Resilience Assessment (ERA) Tool Results: Assessment of existing and alternative installation backup power systems through modeling of life-cycle cost and energy technology architectures.

7. Projects that promote new technology transfer (e.g., Test Bed Application/Innovative Technology) and leverage DoD demonstrated technology (e.g., a technology that has been demonstrated in an Environmental Security Technology Certification Program (ESTCP) project).

8. Projects that contribute significantly to achieving Net Zero emissions at the installation level.

8.1.6. Installation Energy Program Summary (IEPS)

a. IEPS are specific to Navy Installations, provide current performance metrics to ensure future mission success and are designed to identify all energy/water security requirements to include those set out by Office of the Secretary of Defense (OSD).

b. DoN ESF strategy identifies the three pillars of energy security as reliability, resilience, and efficiency.

c. Data management and reporting through IEPS Toolsuite (G2) provides the foundation for development of energy security requirements.

d. IEPS shall include installation requirements, energy audits, mission assurance assessments, energy resilience assessment tools, gaps identified via the IEPS Toolsuite Gap Analysis Module, or similar tools, and all energy project acquisition strategies identified through EPSP (Energy Project Selection Process) to maximize available investment resources.

8.1.7. Point of Contact

Follow-on taskers may be issued to disseminate further guidance and/or highlight new project funding. For questions, please contact Keith Benson, keith.k.benson.civ@us.navy.mil or DSN 312-288-4513.

8.2. Naval Construction Force (NCF) Call for Work

8.2.1. Purpose & Discussion

To provide guidance for submission of Fiscal Year 27-28 Sustainment Restoration and Modernization (SRM) candidate projects in support of the Naval Construction Force (NCF) execution opportunities. Seabees support the SRM program by providing labor to reduce SRM deficiencies at shore facilities. Input is to be provided to the NCF to permit incorporation of Fleet, CNIC and Region priorities to the NCF executable FY 27/28 project list. The NCF will be provided an opportunity to review POM28 (FY27) Special Projects vetted by CNIC N4/N46 Infrastructure Investments with collaboration with the Shore Mission Integration Group (SCFT IIP-WG) Working Group (WG) as applicable, which are deemed to be the appropriate size and scope suitable for NCF execution.

The NCF can execute multi trade, general, Pre-engineered building, vertical and horizontal construction and repair projects. Projects of interest include waterfront and airfield facilities. UCT can execute complex underwater construction, repair, maintenance, inspection, hydrographic surveys, controlled underwater blasting and geotechnical surveys on a variety of ocean and waterfront facilities.

8.2.2. Roles & Responsibilities

a. Installation Commanding Officers. Installations shall submit candidate projects to the NCF following procedures outlined in the forthcoming NCF Work Induction Process message. Submission to CNIC will originate from Installation requirements. Installations shall identify projects by Project Type and Classification of Work. Project Type refers to mission critical/life safety requirements, or footprint reduction. Classification of Work refers to maintenance, repair, or construction. A limited number of mission critical projects classified as minor construction will be allowed. Project submissions must include a summary of total cost (e.g. Seabee materials plus contracted costs for work not being performed by the Seabees, such as demolition, lead and asbestos abatement, or HVAC and fire protection systems). Project costs should also include travel and per diem costs for Seabees starting from FY27.

b. Regional Commanders. Regional Commanders shall review each submitted project for accuracy and thoroughness. Projects are required to address the following criteria:

1. Repair of poor condition mission-critical facilities.

2. Repair of operational and life safety components of facilities.

3. Reduction of facility infrastructure Total Ownership Cost (TOC), optimization of infrastructure footprint, and alignment of infrastructure with force structure.

c. Naval Construction Force. NCF compiles the draft project list, itemized by Group, and submits to the CNIC N46 Point of Contact (POC) for review and approval. Upon approval by CNIC N46, NCF finalizes selection of projects for execution based on training requirements, logistics feasibility, safety, and environmental feasibility.

d. CNIC N4 SRM. CNIC N4 via CNIC N46 reviews the draft project list to ensure all projects meet CNIC intent and alignment with shore SRM priorities and provides necessary feedback to NCF.

8.2.3. Due Dates

All submission deadlines are outlined in Section 1, Table 1, however a brief outline of submissions is provided below:

- Installation Project List Submission due to Regions by 15 June
- Regions submit projects to NCF by 30 June 2025
- Consolidated projects list submitted to CNIC N46 by 15 Aug 2025
- Finalized list provided back to NCF by 12 Sept 2025
- Project list released to the field by 30 Nov 2025

8.2.4. Point of Contact

CNIC point of contact for this matter is Paulette Ujimori, paulette.b.ujimori.civ@us.navy.mil. NECC point of contact is Keith Frederick, keith.a.frederick.civ@us.navy.mil.

MISSION ALIGNMENT

Definition	**Mission Alignment** **Mission alignment is based on Enterprise-validated capability requirements needed to meet current or future CNO strategic intent. Mission Alignment includes properly located, sized, configured and sequenced infrastructure to support current and future Navy force structure, laydown, and operations. Infrastructure is aligned to where the Fleet operates/trains/maintains. Priority is given to projects at installations and locations that support Department of Defense forward assigned or allocated forces.**
Critical (4)	**Meets one of the following:** - **4A** Significantly and directly supports National Security requirements or SECDEF/SECNAV/CNO guidance, directed global posture, a basing decision or, approved new, realigned or increased mission(s) - **4B** Contributes to closing an infrastructure "red" or critical capability gap in forward areas as identified in an approved Enterprise or Theater planning document - **4C** Significantly and directly supports documented Joint or Combatant Commander Mission capability requirement when Navy is the executive agent - **4D** Project strengthens resilience of critical, unique assets and their supporting infrastructure
Very Important (3)	**Meets one of the following:** - **3A** Moderately and directly supports National Security requirements or SECDEF/SECNAV/CNO guidance - **3B** Contributes to closing an infrastructure "red" or critical capability gap as identified in an approved Enterprise or Theater planning document - **3C** Moderately and directly supports documented Joint or Combatant Commander Mission capability requirement when Navy is the executive agent - **3D** Project strengthens resilience of critical assets and their supporting infrastructure
Important (2)	**Meets one of the following:** - **2A** Indirectly supports National Security requirements or SECDEF/SECNAV/CNO guidance - **2B** Contributes to closing "yellow" capability gap as identified in an approved Enterprise or Theater planning document - **2C** Indirectly supports documented Joint or Combatant Commander Mission capability requirement when Navy is the executive agent
Marginal (1)	**Meets one of the following:** - **1A** Aligns with CNO guidance and mission, but provides a small contribution to closing capability gap - **1B** Supports occasional short-term transient Joint Operations
No Contribution (0)	**0A** Meets none of the above criteria

READINESS SUPPORT

	Readiness Support **Readiness support maximizes Navy Enterprise outputs and contributes directly to current and future fleet readiness generation. Readiness benefits can be measured through changes in force generation output, such as increased production rates or decreased time to execute depot maintenance availabilities. Readiness support may also enhance Quality of Service (QOS) for the total Navy workforce and their families by improving facilities where they work, train and live. QOS facilities complement and augment installations with surrounding community capabilities.**
Definition	
Critical (4)	**Meets one of the following:** - **4A** Fully meets BFR with a current capacity rating of 50% or less - **4B** Eliminates documented serious life safety hazards (Risk Assessment Code (RAC) I) - **4C** Improves the quality and reliability of utility services where both the time required to restore temporary service exceeds 8 hours for an electrical outage or 24 hours for a civil-mechanical outage and the outage rate is significantly above industry standard - **4D** Demonstrated 50% improvement to man/train/equip/maint requirements - **4E** Airfield Pavement project aligns with a score of a 4 according to Table 1 (MDI-MCI-PCI Matrix) below [PCI & ACN/PCN ratio must be provided within PDS for all Airfield projects] - **4F** Project aligns with a score of a 4 according to Table 2 (MDI-MCI-Condition Rating Matrix) below - **4G** UH project performs critical construction or repairs in support of must-house population in a failing facility (Condition Rating less than 60)
Very Important (3)	**Meets one of the following:** - **3A** Fully meets BFR with a current capacity rating of 70% or less - **3B** Eliminates documented life safety risks (RAC II) - **3C** Improves the quality and reliability of utility services where both the time required to restore temporary service persists 4 to 8 hours for an electrical outage or 8 to 24 hours for a civil-mechanical outage and the outage rate is slightly above industry standard - **3D** Demonstrated 30% improvement to man/train/equip/maint requirements - **3E** Airfield Pavement project aligns with a score of a 3 according to Table 1 (MDI-MCI-PCI Matrix) below [PCI & ACN/PCN ratio must be provided within PDS for all Airfield projects] - **3F** Project aligns with a score of a 3 according to Table 2 (MDI-MCI-Condition Rating Matrix) below - **3G** UH project performs critical construction or repairs in support of must-house population in a poor facility (Condition Rating 60-79) or in support of non-must house population in failing facility - **3H** Supports Navy QOS in a forward operating area with no off-base alternative
Important (2)	**Meets one of the following:** - **2A** Partially meets BFR with a current capacity rating of 50% or less - **2B** Eliminates documented life safety risks (RAC III) - **2C** Improves the quality and reliability of utility services where both the time required to restore temporary service lasts 1 to 4 hours for an electrical outage or lasts 4 to 8 hours for a civil-mechanical outage and the outage rate is above industry standard - **2D** Demonstrated 10% improvement to man/train/equip/main requirements - **2E** Airfield Pavement project aligns with a score of a 2 according to Table 1 (MDI-MCI-PCI Matrix) below [PCI & ACN/PCN ratio must be provided within PDS for all Airfield projects] - **2F** Project aligns with a score of a 2 according to Table 2 (MDI-MCI-Condition Rating Matrix) below - **2H** Supports Navy QOS in a Fleet Concentration area with no off-base alternative
Marginal (1)	**Meets one of the following:** - **1A** Partially meets BFR with a current capacity rating of 70% or less - **1B** Corrects documented safety deficiencies - **1C** Improves the quality and reliability of utility services where the time required to restore temporary service lasts 5 minutes to 1 hour for an electrical outage or lasts 1 to 4 hours for a civil-mechanical outage - **1E** Airfield Pavement project aligns with a score of a 1 according to Table 1 (MDI-MCI-PCI Matrix) below [PCI & ACN/PCN ratio must be provided within PDS for all Airfield projects] - **1F** Project aligns with a score of a 1 according to Table 2 (MDI-MCI-Condition Rating Matrix) below - **1H** Supports workplace QOS enhancement
No Contribution (0)	**0A** No improvements to fleet readiness

Table 1:

POM28 MDI-MCI-PCI Matrix for Airfield Pavement						
MDI		Completed MCI	Failed, Serious, Very Poor, Poor PCI<=55	Fair PCI 56-70	Satisfactory PCI 71-85	Good PCI 86-100
Critical >=85	OR	Mission Critical	4	3	2	0
Significant <85 and >=70		Mission Essential	3	2	2	0

<95 and >=85		Mission Essential	3	2	2	0
<85 and >=55		Mission Support	2	2	1	0

OPERATIONAL COST

Definition	**Operational Cost** **Operational cost strives to deliver required capabilities at the lowest life-cycle cost, improve the sufficiency of substandard infrastructure and eliminate excess. Operational cost improves the effectiveness of the Navy's shore infrastructure and includes operational process improvement, energy savings, consolidation, conversion, footprint reduction, manpower reductions and Base Operating Support (BOS). Infrastructure projects must capture and quantify savings that are a part of the Navy's total ownership cost.**
Critical (4)	**Meets one of the following:** - **4A** Operational cost savings valued at a payback equal to 5 years or less as documented on a detailed cost analysis
Very Important (3)	**Meets one of the following:** - **3A** Operational cost savings valued at a payback greater than 5 years, but less than or equal to 12 years as documented on a detailed cost analysis
Important (2)	**Meets one of the following:** - **2A** Operational cost savings valued at a payback greater than 12 years, but less than or equal to 18 years as documented on a detailed cost analysis
Marginal (1)	**Meets one of the following:** - **1A** Operational cost savings valued at a payback greater than 18, but equal to or less than 24 years as documented on a detailed cost analysis
No Contribution (0)	**0A** Meets none of the above criteria or has unsupported savings claims

POM28 Detailed Cost Savings Worksheet

Project Details

No.: _____ Title: _____ CWE ($K): _____

SEVERITY

Definition	**Severity** **Severity indicates the likelihood of failure and impact of failure on mission readiness if the project is not executed.**
Critical (4)	**Meets one of the following:** - **4A** Primary mission accomplished with extreme workarounds. Documented loss of mission capability, readiness, or asset - **4B** Severe threat to life risk or the Environment (consent agreement in place) - **4C** AT/FP risk high for critical, unique Fleet assets without other mitigation options - **4D** Cannot meet criteria for legal, regulatory, policy requirement and there is no waiver opportunity.
Very Important (3)	**Meets one of the following:** - **3A** Primary mission accomplished with significant workarounds. Documented degraded mission capability or unit readiness - **3B** Serious injury or damage risk to life or the Environment (consent order issued) - **3C** AT/FP risk high for important primary gathering facilities
Important (2)	**Meets one of the following:** - **2A** Primary mission accomplished with moderate workarounds - **2B** Moderate injury or damage risk to life or Environment (NOV issued) - **2C** AT/FP risk moderate for primary gathering facilities
Marginal (1)	**Meets one of the following:** - **1A** Minor impact on mission or program execution. Little impact to mission capability or unit readiness - **1B** Minimal injury or damage risk to life or the Environment (NOV likely) - **1C** AT/FP risk moderate for important facilities
No Contribution (0)	**0A** No measurable impact on mission or program execution. Able to sustain workload requirements; No impact to mission capability or unit readiness. AT/FP risk low for primary gathering facilities. No injury or damage risk.

Appendix E – POM28 Facilities Investment Structural Model & Weighted Priorities (Decision Lens)

Decision Lens (DL) Assessment Tool

CUI

SMIG WG assessment using criteria

- Strategic Alignment/Guiding Principles
  - Mission Alignment (MA)
  - Readiness Support (RS)
  - Operational Cost (OC)
- Risk
  - Severity (Sev)

Data pulled from internet Navy Facilities Asset Data Store (iNFADS)

- Installation Figure of Merit (IFOM)
  - Capacity (Cap)
  - Condition (Cond)
  - Configuration (Conf)
- NOTE: Can request an override; most commonly used for capacity (platform specific) or condition (targeted system replacement such as roof or HVAC)

Maximum score is a 1.0

- Each element receives a score between 0 and 1 based on the criteria
- High scores require maximizing each element score

Second step to assign FY in Requirements Plan

- Use Mission Need Date (MND) to determine required programming year
- Timing for linked/phased projects

Criteria	Subset Weight	Overall Weight
Strategic Alignment & Guiding Principles	62.42%	
Mission Alignment (MA)	63.63%	39.72%
Readiness Support (RS)	28.24%	17.63%
Operational Cost (OC)	8.13%	5.07%
Subtotal	100.00%	62.42%
Risk	29.09%	
Severity	29.09%	29.09%
Subtotal	100.00%	29.09%
Installation Figure of Merit (IFOM)	8.49%	
Capacity	48.51%	4.12%
Condition	34.36%	2.92%
Configuration	17.13%	1.45%
Subtotal	100.00%	8.49%

CUI 1

DL Score Based on Criteria Scores

CUI

Formula

Score = (.3972 x MA) + (.1763 x RS) + (.0507 x OC) + (.2909 x Sev) + +(.0412 x Cap) + (.0292 x Cond) + (.0145 x Conf)

Example

- Translating scores based on SA/GP & RA to DL
  - Mission Alignment: 4 => 1.0
  - Readiness Support: 4 => 1.0
  - Severity: 4 => 1.0
- Translating IFOM data to DL
  - Capacity: 55 => 1.0
  - Condition: 60 => 0.75
  - Configuration: 87 => 0.35
- Overall DL score based on above data

Score = (.3972 x 1.0) + (.1763 x 1.0) + (.0507 x 0.1) + (. 2909 x 1.0) + (.0412 x 1.0) + (.0292 x 0.75) + (.0145 x 0.35) + = **0.9376**

- Changing one data point can significantly change the overall DL score; e.g., using data above:
  - Changing just MA score from 4 to 3 yields a 0.8211
  - Changing just RS score from 4 to 3 yields a 0.8828
  - Changing just Sev score from 4 to 3 yields a 0.8518

Criteria	Score				
	4	3	2	1	0
Strategic Alignment & Guiding Principles	62.42%				
Mission Alignment (MA)	1	0.7	0.25	0.1	0
Readiness Support (RS)	1	0.7	0.25	0.1	0
Operational Cost (OC)	1	0.7	0.25	0.1	0
Risk	29.09%				
Severity	1	0.7	0.25	0.1	0
Installation Figure of Merit (IFOM)	8.49%				
	0-59	60-79	80-89	90-100	
Capacity	1	0.75	0.25	0	
Condition	1	0.75	0.25	0	
Configuration	1	0.75	0.25	0

Appendix H – Mission Need Date (MND) Definition & Process

Mission Need Date (MND)

CUI

DEFINITION:

The date by which the Supported Commander requires facility infrastructure and all facility outfitting in place to support a specific capability or requirement. The MND must have some documented basis, e.g. arrival of ships, aircraft, personnel, equipment; established Ready for Training (RFT) date; or required life/safety or functional modifications. The Supported Commander defines the MND.

MND Justification Statements should include:

- Distinct timeline from Award to IOC
- Documentation of attachment to specific platform, etc.
- Clear explanation of project development and execution

For MND/Risk Justification Statements & Scoring Criteria Write Ups:

1. Be mindful of slide content & adhere to security guidelines and classifications.
2. Be careful when discussing TCAs, vulnerabilities & single points of failure.
   - The words *Task Critical Asset* associated with a location are **SECRET**
   - Should not use the words *Critical Asset* to describe a facility in a NIPR brief
   - Single point of failure of an entire DoD strategic mission is **TS**
   - Do not use Tier Levels (referring to assets)
   - Vulnerabilities are Confidential or **SECRET**

CNIC N46 HPDs will conduct a thorough review of all MND statements. Only requirements with validated MNDs/statements will be accepted for POM28 submission

CUI

16

Sample MND Statements

CUI

PNO	PROJECT TITLE	MND	SAMPLE JUSTIFCATION STATEMENT
P1329	NEW ELECTRICAL SUBSTATION AND DISTRIBUTION SYSTEM	2022	In 2022 and 2023, five shutdowns and basewide closures in the last two years compromised basewide operations, including NUWC's real-time communications and support for the Fleet and time sensitive RDT&E activities. This also presented a reputational risk to the Naval War College and their real-time wargaming mission. Naval Station Newport has a single point-of-failure electrical substation that is in a state of severe degradation. This project provides a redundant substation (Phase I), and introduces secondary electrical generation sources (Phase II - IV) ensuring power resiliency and mitigating risk.
P276	P-8A AIRCRAFT MAINTENANCE HANGAR	2021	MND 03/17/21 RBOD 03/17/21Established based on change to criteria showing greater than anticipated maintenance requirements for P-8 squadrons. Consequently, NASWI was deficient as criteria changed to reflect this. Failure to execute in will result in inefficiency in maintenance operations and mission degradation. Aircraft have already been assigned to Whidbey without hangar bay capacity required per revised unified facilities criteria. Advanced Airborne Sensor pod reconfigurations will began in FY23 placing an additional 6 months of requirement upon already overtaxed hangar bays. MND = 3/17/21.
P781	CONSTRUCT SECURE LABORATORY FACILITY FOR NAWCWD	2027	Per letter from the Director of the Navy Special Access Program Central Office (DONSAPCO) dated 17 April 2023, all SAP Facilities (SAPF) must meet the security requirements of Intelligence Community Directive (ICD) 705 by 2027. Lack of meeting MND will result in over 115k SF of NAWCWD facilities being unable to support their mission and a projected 400K SF deficiency by 2027 due to mission growth and evolution.
P617	SECURITY & SMALL CRAFT MAINTENANCE FACILITY	2006	In 2006, CNIC directed marine maintenance for NMII Security & Port OPS watercraft be performed at NMII to reduce logistic impacts at remote location despite a lack of adequate facilities (undersized converted WWII Facilities). Port Ops has been using a tension fabric structure as an interim since 2005 to protect workers from the weather & elements awaiting P617. Security forces unable to safeguard weapons and evidence and backup EOC continues to be unmet. P617 consolidates/centralizes forces, minimizes response times and unifies security. NEW FFG(X) Mission & operation increases expected.
P2301 A/B	HSC-25 COMPLEX	2024	This project is "Late to Need". HSC-25 is temporarily occupying Hangar 1, Bldg 40000 at Andersen AFB. Bldg 40000 was constructed to support the Marine Build-up in Guam and is projected to operate in the facility on FY2026. During this time HSC-25 will be required to vacate the facility.

CUI

2

Sample MND Statements (FSRM)

CUI

PNO	PROJECT TITLE	MND	SAMPLE JUSTIFICATION STATEMENT
RM15-0561	REPAIR VP-30 HANGAR ROOF AND HVAC	2025	Fleet Replacement Squadron (FRS) Patrol Squadron VP-30 is the largest aviation squadron in the fleet with their training mission to produce highly trained Maritime Patrol and Reconnaissance (MPRA) fleet squadrons with Naval Air Training and Operating Procedures Standardization (NATOPS) qualified pilots, officers, and enlisted aircrew for the P-3C, P-8A, and MQ-4C. Their average throughput is 1000-1500 Navy airmen. This project restores Hangar 30 roof and HVAC system, which has experienced significant degradation, and impacts mission operations and capability.
ST24-2397	REPAIR ANAEROBIC SEWAGE LAGOON	2024	In 2023 NASWI received Notice of Violations for effluent Total Suspended Solids (TSS) levels exceeding the permit limits. The treatment plant has been granted a one-year extension on its current permit, but it is likely the new permit will require a reduction in total TSS limits which will not be possible without an operational anaerobic cell. The anaerobic process is critical to lagoon type treatment plants. Without this step in the treatment process, further violations and plant treatment issues will result.
RM23-1212	B15, B337, B337 AFF FP SYSTEM REPLACEMENT	2024	Buildings 15, 337, and 337 are currently equipped with ageing fire suppression systems which utilize fluorine AFFF. Fluorinated AFFF may not be used on any military installation after 10/01/23 per the National Defense Authorization Act of 2020.
RM24-2548	MODERNIZE WATERFRONT FIRE FIGHTING SYSTEM	2024	NSB Kings Bay waterfront restricted area firefighting water system does not meet the latest NAVSEA 08 S0070-AC-CCM-010/5010 Firefighting Requirements for Industrial Ship Safety. The utility service is unable to provide uninterruptible availability of firefighting water to the Refit and Dry Dock Piers.

CUI

3

Appendix I – LOE Definitions & Business Rules

Lines of Effort (LOEs) - Definitions

CUI

- **LOE 1 Nuclear Deterrence.** Projects that support Navy Nuclear Deterrence Mission performing production, processing, maintenance, training, and command/control functions as determined by NNDM (i.e. Strategic Weapon System; SSBNs; Nuclear Command, Control and Communication (NC3); and Transit Protection Program (TPP)).
- **LOE 2 Naval Operational Architecture.** Projects that support Navy C5ISR as determined by OPNAV N2N6.
- **LOE 3 Critical Readiness Infrastructure.** Projects that directly support aviation, ship and submarine intermediate and depot maintenance; execution of the Strategic Laydown and Dispersal (SLD) design at existing locations; Defense Critical Infrastructure (DCI); and Fleet Commander Operational Enablers.
- **LOE 4 Global Networks (New Platforms).** Projects that are critical to the 1) delivery of new warfare platforms or 2) associated RDT&E facilities supporting delivery of new warfare platforms as determined by OPNAV N9 and not identified in LOE 3
- **LOE 5 Health of the Force.** Projects that support Quality of Service such as Training, Child Development Centers, Sailor and Family Readiness, Unaccompanied Housing, MWR, Medical, and Dental as determined by OPNAV N4.
- **LOE 6 Global Networks (New Locations).** Projects that are critical to SLD decisions at new, enduring locations, and non-enduring locations, to include Cooperative Security Locations and Contingency Locations, as determined by Fleet Commander requirements.
- **LOE 7 Operation Support Infrastructure.** Projects that are critical to operations and do not meet the criteria of LOEs 1 thru 6.

CUI

1

Lines of Effort (LOEs) – Business Rules

CUI

- Projects that can be categorized to multiple LOEs will be assigned to the lowest number LOE as the primary LOE.
- Projects that can be categorized to multiple LOEs will be able to be assigned a "pending" LOE if there is a time critical aspect to the project if not accomplished on the understood timeline. Determine during initial phase of IIP Development.
- LOE Leads will establish their unique LOE prioritization method that will be able to be explained based on the criteria for that functional group.
- LOE Prioritized Lists will be provided to the SHORE CFT for overall integrated and prioritization binning during midpoint of IIP Development
- Training Categorization
  - General Training for All – Aligned to LOE 5
  - Community Specific Training – Aligned to LOE 5
  - Platform Specific Training – Aligned to LOE of Platform or Force
  - Caveats – Fleet Commanders can declare LOE 3
- Utilities
  - Electrical Distribution Backbone projects – Aligned to LOE 3
- RDT&E
  - RDT&E that supports Multiple Platforms– Aligns to LOE 4
  - Platform or Initiative Specific RDT&E – Aligned to LOE of Platform or Force
  - Caveats – Fleet Commander can declare LOE 3, NNDMOC can declare LOE 1
- SIOP, FIOP
  - Aligns to LOE 3
  - Caveats: NNDMOC can declare LOE 1
- NNDMOC declarations captured in annual NNDMOC Results
- Fleet Commander declarations captured via IRP (Unconstrained IIP?) concurrence, comment

CUI

Appendix J – Risk Assessment Requirement Evaluation

Risk Management – Phased Integration

Per TAB 1A of Navy Shore Cross Functional Team (CFT) Governance:

3.f.2 CNIC will […]develop a single comprehensive risk assessment process with assistance from the Fleets that aligns Shore investment to Fleet operations and readiness outcomes, to include mission- and non-mission-oriented areas such as QoS. Process should address operational, institutional, safety, reputational, and regulatory risk of making or not making infrastructure investments relative to Force Development (F_d), Force Generation (F_g), and Force Employment (F_e) using the Joint Risk Assessment Methodology (JRAM).

Probability

Level	Specific Item	Fleet or Inventory
Very Likely	85%-100% chance event will occur in the life of an item	Continuously experienced.
Likely	55%-85% chance event will occur	Will occur frequently.
Unlikely	25%-55% chance event will occur	Will occur several times.
Very Unlikely	0%-25% chance event will occur	Unlikely, but can reasonably be expected to occur.

Table 1

	Extreme	Major	Moderate	Minor
Very Likely	High	High	Medium	Medium
Likely	High	Medium	Medium	Low
Unlikely	Medium	Medium	Low	Low
Very Unlikely	Medium	Low	Low	Low

Table 2

Category	Abbr	Examples	Valued Items	Definition
Operational	OPS	o Degraded runway	o Missions o Objectives o Readiness	Risks that could impact tactical and operational warfighting and intelligence missions and objectives.
Institutional	INS	o Inability to conduct LVC or RRL training	o Organizational Effectiveness o Program Health o Force Health	Risks that could impact the ability of an organization to perform established functions in support of force generation and force development.
Safety	SAF	o Lack of fire suppression	o People o Physical Health o Mental Health	Risks that could cause injury, illness, disability or the loss of life.
Reputational	REP	o Issues with water quality (AFFF release); Ex. Red Hill o Poor conditions for UH at training locations	o Reputation o Confidence o Credibility o Relationships	Risks that could expose the organization to negative publicity, diminished confidence, or threaten the values and integrity of the organization.
Regulatory	REG	o Failing Nuclear Reactor certification o Any Environmental non-compliance	o Compliance o Certification o Ability to Operate o Funding	Risks that could result in not meeting legislative or regulatory requirements.

ACTION:
Regions shall provide a (1) **Risk Category** & (2) **Justification Statement** for all projects within the POM25 (FY25-FY32) FYDP that are categorized as "**High** Risk" based on Tables 1 & 2. Statements will begin with a 3-letter alpha abbreviation (shown in "Abbr" column above) followed by a brief statement detailing why the project is associated to that Risk Category and entered into the *Facility Information Comments* section of the IPL. Ex. "*OPS - "…statement…"*"

17

Sample Risk Statements

CUI

CATEGORY	SAMPLE JUSTIFICATION STATEMENT
Operational (OPS)	As the [xx] busiest Navy ordnance depot in the [xxx] ACR, [Installation's] ammo wharves are crucial for bulk loading/offloading of ammunition. However, constraints at Wharf 1 and frequent unavailability of Wharf 2 cause delays, rescheduling, and reduced capacity (~xx%). Restoring and modernizing Wharf 2 is essential to regain full mission capability and support Fleet operations, particularly during contingency operations and mission surges.
Institutional (INS)	The [Facility] is unable to meet required turnaround times for [testing/labs/etc.]. Due to the high density of equipment, [Facility] must shut down operations to prevent overloading the aging and under capacity [System component/asset]. [xx] outflow from the building is insufficient and leads [describe issue] throughout the facility. Due to these issues, processing time is delayed leading to fewer assets [people/parts/equipment/etc.] returning to Fleet to perform assigned tasks.
Safety (SAF)	Facility has outdated electrical infrastructure and has a documented significant fire risk and public safety concern [Facility xxx study dtd DD/MM/YY]. [System component/asset] failures and physical layout have also led to [xx] responses from MM/YYYY to MM/YYYY, including [xx samples of safety concerns] unmitigated by available workarounds. BACII life safety, significant risk to general life safety and welfare. Unsafe for occupancy.
Reputational (REP)	Without [Project] the Navy faces significant reputational risk [media attention (traditional/social); potential litigation; peer/competitor, etc.]. [Project] resolves all known potential reputational risk issues [list specific risk issues and how they will be addressed]. [Include any prior examples of documentation of reputational risk, if they exist].
Regulatory (REG)	Without the [Project], the Navy fails to meet the criteria for compliance with new/increased environmental regulations. The impending closure of current open facilities operations will result in significant impacts to installation's mission readiness. Also, the current mitigation processes require extreme workarounds. Potential fines of [$$$]. [Include specific regulatory requirements].

Appendix L – Environmental Planning & Conservation Resources Impacts Checklist

ENVIRONMENTAL PLANNING AND CONSERVATION RESOURCES IMPACTS CHECKLIST

This Environmental Checklist is utilized during the POM SMIG PRI MILCON project validation process to determine which environmental requirements are associated with a proposed project. Use the installation or activity command environmental project planning checklist attached to the DD Form 1391 as a guide. Double click on gray boxes to check YES, NO, or N/A.
Enter comments to numbered questions or requirements into ADDITIONAL REQUIREMENTS or COMMENTS space on last page.

GENERAL PROJECT INFORMATION		
1	Activity Requesting:	
2	Activity POC / Phone / email:	
3	Name of Project:	
4	MILCON Project Number:	
5	Project Location:	
6	Project Type:	MCON
7	Brief Description of the Project:	
8	Why is this project needed?	
9	When project scheduled to begin?	

PLANNING QUESTIONS		
10a	Total Project Area (sq. ft.) - (Include clear zones, laydown areas, etc.)	
10b	Percentage of Project Area currently impervious (asphalt, bldgs, etc.)	
10c	Percentage of Project Area proposed to be impervious once project completed	
10d	Percentage of Project Area to be disturbed (excavated, graded, filled, etc.)	
11	How will storm water be managed in the long-term (post-construction)?	
12	How will sanitary or industrial wastewater be managed in the long-term?	
13	Will actions be conducted in the water (dredging, new pilings, etc.)? If yes, state which actions will occur.	
14	Will the project involve airfield, explosives, or radiation safety issues?	
15	Will the actions be conducted in an area under an agriculture out lease?	
16	Will the actions require real estate actions such as land purchases or leases?	

DESIGN/CONSTRUCTION RELATED QUESTIONS		YES	NO	N/A
17	Will trees be removed?	☐	☐	☐
18	Will demolition or renovation be required?	☐	☐	☐
19	Will connection to existing utilities be required?	☐	☐	☐
20	Will the project remove, install or utilize a petroleum storage tank, that is >=55-gallons?	☐	☐	☐
21	Will the project remove or install an Oil Water Separator?	☐	☐	☐
22	Will the project relocate excavated material at the Installation?; if yes – Where:	☐	☐	☐

23	Will the project generate by-products such as used oil, engine fluids, solvents, asbestos, PCBs, hazardous waste, ODS & halons, lead-based paint, C&D debris, AFFF, etc.?	☐	☐	☐
24	Will the project be located on or near an active, inactive, or closed range?	☐	☐	☐
25	Will site preparation or construction actions require de-watering?	☐	☐	☐
26	Will emission-generating equipment be installed (e.g., paint booth, emergency generators)?	☐	☐	☐
27	Will activity operation/maintenance involve storage, use, or disposal of hazardous substances?	☐	☐	☐
28	Will any new processes or maintenance activities be conducted? If so, describe in comments.	☐	☐	☐

Checklist Preparer, phone number and e-mail (if Same as Question #2 – Type "SAME") **SAME**	**Date**

ENVIRONMENTAL PLANNING AND CONSERVATION RESOURCES IMPACTS CHECKLIST

SUMMARY OF ENVIRONMENTAL REQUIREMENTS

NOTE: NEPA Yes/No block has a drop down menu; double click gray box. Responses are TBD, CATEX, EA, or EIS.

Name of Project:	
Project Number:	

PLANNING REQUIREMENTS (Issues That Can Affect the Project's Timeline, Cost or Site Location)

Environmental Aspect	YES	NO	Environmental Requirement	Project Impacts
National Env Policy Act (NEPA)	TBD		CATEX = 2 – 6 months (with external consultations) weeks; EA = 8 - 18 months; EIS = 24 – 36 + months	Can't award till NEPA complete
Threatened, Endangered Species	☐	☐	Consultations with Regulators required	Process may take 6 months
Marine Mammals	☐	☐	Consultation with NMFS required	Process may take 6 months
Essential Fish Habitat	☐	☐	Consultation with NMFS required	Process may take 6 months
Migratory Birds/Eagles	☐	☐	Permits possibly required; restrict construction during breeding season	Process may take 6 months
Jurisdictional Wetlands	☐	☐	Permits and possibly mitigation required	May take 7 months -after NEPA
Noise	☐	☐	Permits and possibly mitigation required	Process may take 4 to 6 months
Navigable Water Impacts	☐	☐	Permits required	Takes 2-7 months – after NEPA
Dredge & Fill; Spoil Placement	☐	☐	CWA 404 Permit & CWA 401 Certification required	Takes 2-7 months – after NEPA
Coastal Zone Management Act	☐	☐	Coastal Consistency Determination (CCD) required.	Process takes up to 120 days
Cultural & Historic Resources	☐	☐	Consultations with SHPO or THPO required	Process may take 1 to 6 months
Tribal Treaty Rights	☐	☐	Consultations with Native American tribes required; mitigation may be required	Process may take 1 to 6 months
NAGPRA Impacts	☐	☐	Consultations with Native American tribes required; on-site monitor may be required during construction	Process may take 1 to 6 months
UXO; Munitions/Explosives	☐	☐	UXO survey and/or Munitions & Explosives of Concern Hazard Assessment may be required	May add costs and time
Major Air Emission Source	☐	☐	Clean Air Act Permit required.	Process takes 6 months
Construction Emissions	☐	☐	Air Conformity Record of Non-Applicability is required	Process takes 1 week
Installation Restoration	☐	☐	Land-use controls may exist; consultation with USEPA or State required	Process may take 4 months
Petroleum Contamination	☐	☐	Follow guidance in CNRMA POL SOP	May add costs to project
Tree Clearing	☐	☐	Compensation for tree loss or mitigation may be required; Forester must appraise trees as merchantable timber	May add costs and time
Agriculture Out lease	☐	☐	Consultations with NAVFAC Real Estate required	Process may take 1 to 3 months
Public Participation	☐	☐	Scoping meetings and/or public review/meetings	Process may take 6 months

DESIGN REQUIREMENTS (Issues To Be Addressed In Design Phase)

Storm Water Best Mgmt Practice	☐	☐	Required for projects that will disturb >/= 1 acre of land.	Incorporate into the design
Erosion & Sediment Control	☐	☐	Required for projects that will disturb >/= 10,000 sq ft.	Incorporate into the design
State Storm Water Mgmt Permit	☐	☐	Required for projects that will disturb >/= 1 acre of land.	Obtain before construction
Sea level rise or storm surge	☐	☐	Use NAVFAC Climate Change Planning Handbook	Incorporate into the design
Beach & Dune Management	☐	☐	Protective Measures required for beach & dune impacts	Incorporate into the design
Floodplain Location	☐	☐	Avoidance or Protective Measures required	Incorporate into the design
Spill Prevention Measures	☐	☐	Secondary containment required for tanks >/= 55-gal	Incorporate into the design
Leadership in Energy and Enviro Design	☐	☐	For renovations exceeding 50% of replacement value	Incorporate into the design

ADDITIONAL REQUIREMENTS or COMMENTS

Appendix N – Sample Mitigation Plan and Cost Risk Statement

MITIGATION PLAN AND COST RISK STATEMENT

Title:
Unspecified Minor Construction (UMC) Project P098U, CMV-22B Operational Training Facility

Background:
The UMC threshold for Iwakuni, Japan is $6M.
The DD1391 total cost estimate for P098U is $5.95M.
Estimated project costs are within 99.2% of the threshold and has 10% contingency.

Mitigation Plan:
In order to increase the probability of awarding P098U beneath the UMC threshold, the project's internal government estimate (IGE) has been divided into a base with 8 options:

	Option	Trade	Est. Cost	Impact
1	New Concrete Ramp and Pad	Civil	$43,504	One time-use to get trainer equipment in. Can use temporary ramp. No impact on functionality of the trainer.
2	Enclosure Fence	Civil	$31,048	Enclosure fence for the transformer and HVAC equipment is at the request of utilities. No impact to functionality of the trainer.
3	Epoxy Floor Coating	Arch	$21,418	Dust protection. No impact to functionality of the trainer.
4	Interior Painting of Simulator Bay	Arch	$12,294	Dust protection. No impact to functionality of the trainer.
5	Sustainability Reporting	Arch	$71,757	Satisfy UFC-1-200-02. No impact to functionality of the trainer.
6	10-Month Warranty & Occupancy Phase for Commissioning (Post-occupancy)	Mech	$39,137	Partial scope of commissioning for post occupancy. No impact to functionality of the trainer.
7	TAB - 2 seasons	Mech	$16,997	Partial scope of HVAC Testing and Balancing (TAB). No impact to functionality of the trainer.
8	AMI panel board	Elec	$35,606	Advance Metering Infrastructure (AMI) panel board for future connection. Currently, no base-wide AMI infrastructure. No impact to functionality of trainer.

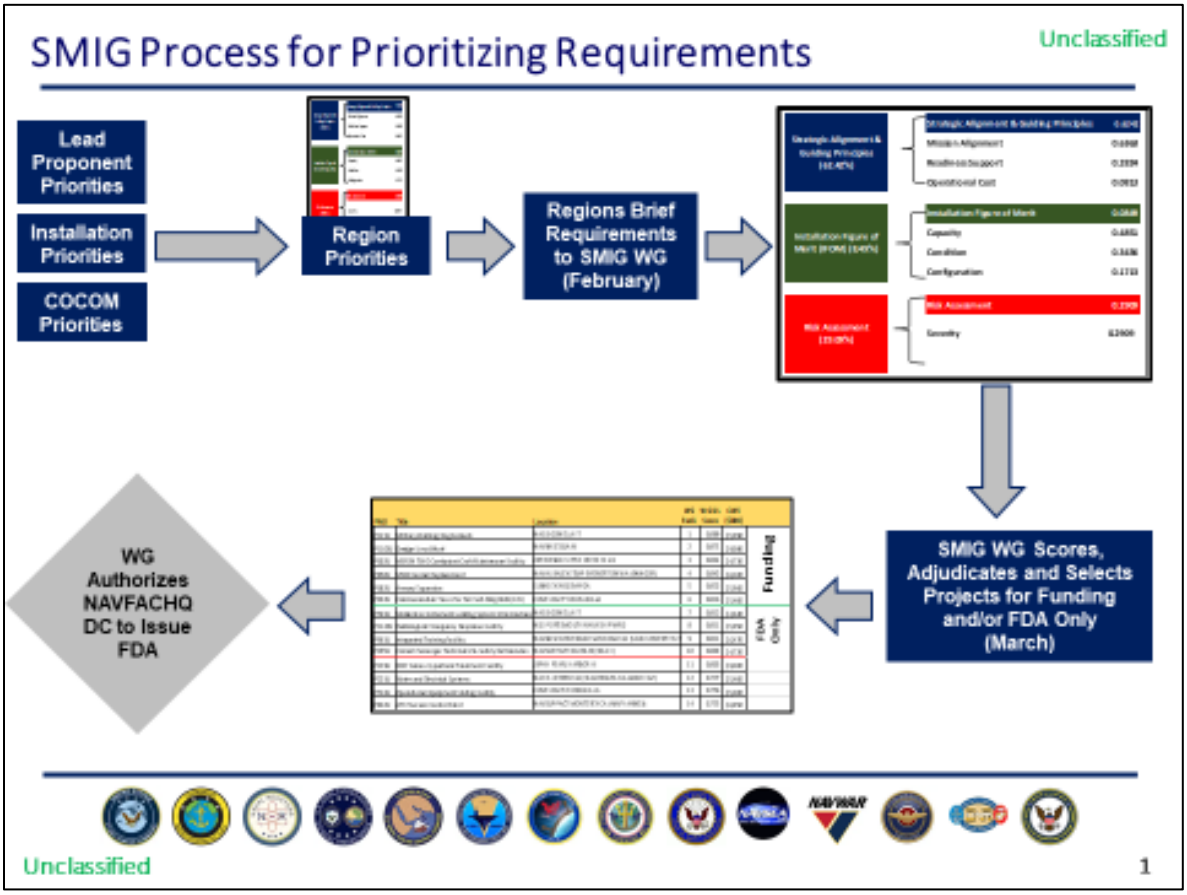
The project is complete and usable without the options.

Cost Risk:
- Base: $4,676,039 (ECC cost)
- Base (with 6.5% SIOH and 10% Contingency): $5,477,980
- Total Options: $271,761

The fully burden cost, accounting for contingency and supervision, inspection, and overhead (SIOH), for the base alone is $5.5M which is 92% of the threshold. Options will be awarded as able based on the value of the winning proposal. The cost estimate has been generated by an in-house NAVFAC estimator using in-country prices yielding a high degree of confidence.

Mission Impact:
OPNAV N98 validated the mitigation plan as having no operational impact to mission. The bid options as addressed are not required.

Appendix O – UMC Selection Process



Appendix P – RMIG Best Practices

REGION MISSION INTEGRATION GROUP (RMIG) BEST PRACTICES

Components	Minimum Requirements	Best Practices	Comments
Scope	• Military Construction (MILCON) • Special Projects • Unspecified Minor Construction (UMC)	*MILCON, Special Projects, UMC and:* • Space Management • Energy • Capability Gaps	• RMIG does not have to tackle all Region issues, can be delegated to the RMIG WG.
RMIG Membership	• **RMIG Chair:** Regional Commander (REGCOM) or REGCOM designated representative • **Membership:** Global Representatives with decision making authority (or their designees) from resident WE/Ps and/or Navy Component Commands (NCCs) • Region N4 participates in all RMIG meetings	• **RMIG Chair:** REGCOM • **Membership:** Global Representatives with decision making authority from resident WE/Ps and/or NCCs participate **and vote** • Region N4 participates in all RMIG meetings • **Advisory Members:** Program Directors, Chief of Staff, CNIC Headquarters N4 and/or N5 Warfare Enterprise Action Officers (WEAOs), and the Fleets	• The RMIG/RMIG WG membership varies greatly from Region to Region. Almost all Regions include the Global WE/P representatives. • The unanimous preference includes Global WE/P representatives with voting authority and Region N-codes as advisory participants.
RMIG WG Membership	• **RMIG WG Chair:** Regional Engineer or Region ED • **Membership:** Proxies from the RMIG - Resident WE/P and/or NCCs, N-Codes, and Installation Commanding Officers (per the Region's discretion)	• **RMIG WG Chair:** Regional Engineer • **Membership:** Proxies from the RMIG (Resident WE/P and/or NCCs), N-Codes, and Installation Commanding Officers	• More open participation allows collaboration and perception that there is an ability to influence decisions.
Processes:	• **Project Briefs:** Region's discretion • **Prioritizing Projects:** – Region hears stakeholder concerns but makes final decision – Decision Lens used to prioritize MILCON and Special Projects requirements and strongly encouraged for UMC requirements	• **Project Briefs:** Installation Commanding Officers Brief their Requirements as having project ownership yields informative briefs, with more focus on operational-type impacts • **Prioritizing Projects:** – Decision Lens is the starting point and used to prioritize MILCON, Special Projects, and UMC requirements. – Other stakeholders have a vote but Region (as the chair) has the final say if resolution cannot be reached.	• Scoring of Projects ranges from ARE only to full scoring by all WG members to include Region and WE/P representatives. • When processes are inconsistent or not defined it creates significant variance between RMIG and SMIG rankings. • A key part of the overall process is WE/P participation at a significant (Scoring / Ranking) level.
Deliverables	• MILCON IPL • Special Projects IPL • UMC IPL	*MILCON, Special Projects, UMC IPLs and:* • Energy IPLs • Space Management Plans • Capability Gap Analysis • Region Integration Plan (RIP)	

Appendix Q – SCFT IIP-WG & RMIG Collaboration.

Bottom-Up IIP Development (Regions)

CUI

Typical RMIG-WG

Region (CO and N-code reps) (Chair)	Lead Proponents and COCOMs in AOR (IWE, MSC, MyNavy HR, NAE, NAVAIR, NAVFAC, NAVSEA, NAVSUP, NAVWAR, NECE, NHHC, NMC, ONR, SPECWAR, SSP, SWE, USW) (May Vote)

Typical Region Mission Integration Group (RMIG)

Region (CO and N-code reps) (Chair)	Lead Proponents and COCOMs in AOR (IWE, MSC, MyNavy HR, NAE, NAVAIR, NAVFAC, NAVSEA, NAVSUP, NAVWAR, NECE, NHHC, NMC, ONR, SPECWAR, SSP, SWE, USW) (May Vote)

CNIC issues annual guidance

- SCFT IIP-WG Charter & Facility Investment Guidance, Fiscal Years 2028 – 2032 (POM28)

Installation level

- Installations not required to use the same process to determine priorities, but many do
  - Major tenants and N-codes typical membership

Collaborative process at Region level

- Utilize the same mathematical model as the SCFT in the prioritization process
- CNIC guidance directs Regions to hold RMIGs; membership and processes vary by Region
  - Good stakeholder participation and discussion
  - Enables Lead Proponents and COCOMs to influence decisions
- Current focus on MILCON (MCON) and FSRM CMP (O&M,N)
  - Space management and Energy may also be addressed within the RMIG construct
- Regional Engineer briefs priorities to SCFT IIP Phase 1 WG
  - Lead Proponents and COCOMs participate

CUI 1

Bottom-Up IIP Development (WGs)

CUI

POM28 SCFT IIP-WG Members (Phase 1 - Unconstrained)

CNIC (Chair)	USFF* (Core-WG)	PACFLT* (Core-WG)	MyNavy HR* (Core-WG)
USFCC (Core-WG)	NR (Core-WG)	NAVCENT (Core-WG)	NAVEURAF (Core-WG)
OPNAV N41* (Advisory)	OPNAV N98* (Advisory)	NNDMIG* (Advisory)	OPNAV N91* (Advisory)
NAVWAR (Advisory)	NAVAIR (Advisory)	NAVSEA (Advisory)	
SSOP (Advisory)	NR&DE (Advisory)	NAVFAC (Advisory)	

*LOE Lead

POM28 SCFT IIP-WG Members (Phase 2 - Constrained)

CNIC (Chair)	USFF* (Core-WG)	PACFLT* (Core-WG)	MyNavy HR* (Core-WG)
OPNAV N41* (Core-WG)	OPNAV N98* (Core-WG)	NNDMIG* (Core-WG)	OPNAV N91* (Core-WG)
USFCC (Advisory)	NR (Advisory)	NAVCENT (Advisory)	NAVEURAF (Advisory)
NAVWAR (Advisory)	NAVAIR (Advisory)	NAVSEA (Advisory)	
SSOP (Advisory)	NR&DE (Advisory)	NAVFAC (Advisory)	

*LOE Lead

Phase 1 – Unconstrained IIP

- Assess projects from all CNIC Regions (all Lead Proponents & COCOMs invited to brief Shore CFT and participate in Region briefs)
  - Use mathematical model (Decision Lens) with qualitative & quantitative inputs
    - Qualitative: Mission Alignment, Readiness Support & Severity
    - Quantitative: Condition, Configuration & Capacity data from the Navy's real property database
    - Single model (MILCON and FSRM) utilized for POM28

Phase 2 – Constrained IIP

- Assess for projects missing from LOE lists
  - Insertion of missing projects into existing Phase 1 IIP base on LOE focus area priorities
  - LOEs finalize 1-N within LOE
  - LOE Leads review all 1-Ns and integrate projects into one all-encompassing IIP

CUI 2

Appendix R – Acronym List

ACRONYM	DESCRIPTION
A	
ACF	*Area Cost Factor*
B	
BES	*Budget Estimate Submission*
BY	*Budget Year*
C	
CDC	*Child Development Centers*
CFT	*Cross-Functional Team*
CND	*Capability Need Date*
CNO	*Chief of Naval Operations*
CO	*Commanding Office*
CWE	*Current Working Estimate*
D	
DD1391	*Department of Defense Form 1391*
DEMO	*Demolition*
DSD	*Director, SIOP Department*
E	
EPG	*Electronic Project Generator*
ERCIP	*Energy Resilience & Conservation Investment Program*
F	
FY	*Fiscal Year*
FYDP	*Future Years Defense Program*
G	
H	
I	
ICP	*Infrastructure Capability Plan*
IEPS	*Installation Energy Program Summary*
IFOM	*Installation Figure of Merit*
IIP	*Infrastructure Investment Plan*
IMIG	*Installation Mission Integration Group*
IPL	*Integrated Priority List*

J

JRAM	*Joint Risk Assessment Methodology*

K

L

LANT	*Atlantic*
LOE	*Line of Effort*
LRP	*Laboratory Revitalization Program*
